Scion Publishing is pleased to announce the Methods Express Series: protocol books designed for busy life scientists.

**The Methods Express Series helps you**

- Choose the right method – each book describes the techniques and approaches available, critically assesses each one, and advises you which to use when
- Complete the technique successfully – step-by-step protocols tested by the authors; hints and tips to help you avoid common pitfalls; example data and troubleshooting sections to guide you when things go wrong
- Find the best primary literature – when you need more information, our annotated reference lists take you straight to the key areas.

---

**PCR**

Edited by Simon Hughes, Tumor Biology Laboratory, Cancer Research UK Clinical Centre, UK and Adrian Moody, AstraZeneca, Macclesfield, UK

*PCR: Methods Express* describes the latest PCR-based methodologies and approaches and provides the most up-to-date practical advice on how to tackle a broad range of biological problems using these techniques. Every chapter discusses the merits and limitations of various approaches and then provides selected tried-and-tested protocols with useful hints and tips for success, along with strategies for optimization. This book is an essential laboratory manual for researchers at all levels, from postgraduate student to principal investigator.

- Paperback, $75 ISBN 978-190484228-6
- Hardcover, $125 ISBN 978-190484229-3

---

**Bioinformatics**

Edited by Paul Dear, MRC Laboratory of Molecular Biology, Cambridge, UK

*Bioinformatics: Methods Express* is unique. It is a book on bioinformatics that makes sense to non-bioinformaticians. It couples accessible theoretical background information with the explicit protocols that non-bioinformaticians needx Every chapter discusses the merits and limitations of various bioinformatics approaches and then provides clear advice and unambiguous protocols. It is an essential companion for all researchers, from graduate students to principal investigators, whose work can benefit from a bioinformatics approach.

- Hardcover, $125 ISBN 978-190484223-1

---

**DNA Microarrays**

Edited by Mark Schena, Array IT, Life Sciences Division, California, USA

*DNA Microarrays: Methods Express* covers the very latest in DNA microarray technology, with a clear focus on how these techniques can be used in the lab to gain the very best results. The authors are from some of the leading laboratories in the field and write with real authority on the latest methodology. Every chapter provides detailed step-by-step protocols with valuable hints and tips for success, and also gives typical experimental results and selected literature citations. This book is a “must have” manual for researchers in all fields of biology, medicine and agriculture.

- Paperback, $75 ISBN 978-190484215-6
- Hardcover, $125 ISBN 978-190484222-4

---

**Proteomics**

Edited by C. David O’Connor, Centre for Proteomic Research, University of Southampton, UK

*Proteomics: Methods Express* identifies the most powerful new technologies and presents them in a way that allows their robust implementation.

The focus is on proteomic methods and strategies that are reliable and of general applicability. Each chapter presents descriptions of what can, and cannot, be achieved with the relevant procedures so that readers can make informed judgments prior to establishing the methods in-house.

Every chapter discusses the merits and limitations of various approaches and then provides tried-and-tested protocols with hints and tips for success and troubleshooting for when things go wrong.

- Hardcover, $125 ISBN 978-190484220-0

---

**Expression Systems**

Edited by Michael R. Dyson, Wellcome Trust Sanger Institute and Yves Durocher, Biotechnology Institute, NRC, Saskatchewan, Canada

*Expression Systems: Methods Express* is a comprehensive research guide that describes both the key new techniques and more established methods. Every chapter discusses the merits and limitations of the various approaches and then provides selected tried-and-tested protocols, as well as a plethora of good practical advice, for immediate use at the bench.

- Paperback, $75 ISBN 978-190484227-7
- Hardcover, $125 ISBN 978-190484228-4

High-Definition Genomics means a higher standard in genomic and epigenomic research, both with respect to individual analyses as well as from integration of data on many forms of genome variation. We work with scientists around the world to develop and deploy new tools for acquiring high-quality, high-resolution, genome-wide data. Our customers obtain a clearer view of genome variation and how it relates to biology and medicine.

**NimbleGen cutting-edge applications:**
- ChIP-chip—genome-wide transcription factor mapping
- Array CGH—DNA copy number with sub-Kb resolution
- Gene Expression—cost-effective multiplex options
- Alternative Splicing—all exon splice variants
- DNA Methylation—entire genomes at high resolution

**Long oligonucleotide probes**
Ensure highest sensitivity and better signal-to-noise ratios compared with short probes.

**Ultra-high density arrays**
Capture more information than other platforms with up to 2 million data points per experiment.

**Whole genome or targeted region analysis**

Only NimbleGen
- offers both ultra-high density and long oligo probes, allowing you to obtain both high volume and quality data in each experiment
- Until you’ve compared our data with your current approaches, you won’t realize just how much you’re missing.

Start your microarray project with NimbleGen today, and experience High-Definition Genomics.

Choose DNA ladders from New England Biolabs and take the guesswork out of your DNA sample analysis. Select the ladder to suit your experimental needs and let our sharp, evenly spaced bands help you achieve accuracy in your analysis. For your convenience, supplemental loading dye is now provided with all ladders. In addition, our most popular ladders are available in a Quick-Load™ (contains blue dye to track migration) and a TriDye™ format (contains three dyes).

Advantages:
- Stable at room temperature
- Sharp, uniform bands
- Easy-to-identify reference bands
- Can be used for sample quantitation
- No unnecessary backbone DNA present
- Exceptional value

NEW! SUPPLEMENTAL LOADING DYE NOW INCLUDED
In a single instrument run, the Genome Sequencer FLX System generates over 400,000 reads of 200 to 300 bases with 99.5% accuracy per read.

- Perform de novo sequencing of whole genomes.
- Analyze full-length cDNA, including splice variants.
- Discover viral subtypes (e.g., HIV).
- Uncover the diversity in metagenomic samples.

More Flexibility, More Applications, More Publications

Visit www.genome-sequencing.com to learn about the expanding number of peer-reviewed publications appearing weekly.
Dogs of different breeds can range remarkably in size, shape, and behavior, and yet they all carry essentially the same genome, making them a particularly fascinating model for genome plasticity. The recent release of the complete sequence of the dog genome provides an exciting new context in which to consider such variation. Twenty-five chapters written by experts in the field include various aspects of morphological and behavioral variation in dogs, their origins and domestication, and their unique value as a model system for many common but complex human diseases such as diabetes and cancer.

CONTENTS

BREED CLUBS AND CANINE HISTORY

Working Dogs: History and Applications
The Kennel Club and the Early History of Dog Shows and Breed Clubs
American Breed Clubs and Health Initiatives

BREED CHARACTERISTICS AND MORPHOLOGY

Morphological Variation in the Dog
Genetic Analysis of the Canid Skeleton: Morphological Loci in the Portuguese Water Dog Population
Morphology and Behavior: Are They Coupled at the Genome Level?

CANINE ORIGINS

From Wild Wolf to Domestic Dog
mDNA Studies of the Origin of Dogs
Understanding Genetic Relationships among Purebred Dogs: The PhyDo Project

GENOMICS AND GENOME ORGANIZATION

Karyotype and Chromosomal Organization
The Dog Genome: Sequence, Evolution, and Haplotype Structure
SINEs of Canine Genomic Diversity
The Dog Olfactory and Vomeronasal Receptor Repertoires
The Canine Major Histocompatibility Complex

GENETIC DISEASE AND GENE MAPPING

Breed-specific Hereditary Diseases and Genetic Screening
Models, Mutants, and Man: Searching for Unique Phenotypes and Genes in the Dog Model of Inherited Retinal Degeneration
Copper Toxicosis in Bedlington Terriers
Cystinuria
Molecular Genetics of Dilated Cardiomyopathy

Sex Chromosomes, Sexual Development, and Sex Reversal in the Dog
QTL Mapping Using Crossbreed Pedigrees: Strategies for Canine Hip Dysplasia

CANCER

Breed-specific Canine Lymphoproliferative Diseases
Cancer Biology in Dogs

GENE THERAPY

Gene Therapy for Metabolic Inherited Diseases in Dogs

BEHAVIOR

Behavioral Genetics of Dog Cognition: Human-like Social Skills in Dogs Are Heritable and Derived
The Genetics of Domesticated Behavior in Canids: What Can Dogs and Silver Foxes Tell Us about Each Other?

Assistant/Associate Professor of Bioinformatics/Computational Biology
Department of Biostatistics
Harvard School of Public Health

The Department of Biostatistics at Harvard School of Public Health (HSPH), is seeking an outstanding candidate for a tenure-track faculty position in Bioinformatics/Computational Biology at the level of Assistant or Associate Professor. The successful candidate would join an active group at HSPH developing novel computational and statistical methods, and conduct collaborative research with clinical and basic scientists at Harvard University and its affiliated medical centers. She/he is expected to play a vital leadership role in expanding the quantitative science research and educational programs at HSPH in bioinformatics and computational biology and its related fields. Candidates should have doctoral degree and a demonstrated record of achievement; candidates in all areas of computational biology, bioinformatics and statistical science are encouraged to apply. Please send a letter of application, including a statement of current and future research interests, a curriculum vitae, sample publications, and the names of three referees to the address below. Applicants should ask their three referees to write independently to this address.

Computational Biology Junior Faculty Search Committee
Department of Biostatistics
Harvard School of Public Health
655 Huntington Avenue, 4th Floor
Boston, MA 02115

Harvard School of Public Health is strongly committed to increasing the representation of women and minority members among its faculty and particularly encourages applications from such candidates.

Faculty Positions
Yale Stem Cell Center
Yale University School of Medicine

The newly established Yale Stem Cell Center invites applications for faculty positions at the rank of Assistant, Associate, or Full Professor. Rank and tenure will be commensurate with experience. Applicants should have a Ph.D. and/or M.D. degree. Each successful candidate will be expected to develop a vigorous, externally funded research program on fundamental questions related to the biology of embryonic or adult stem cells. Investigators will join a vibrant stem cell research community at Yale with over 40 labs working on various aspects of stem cell biology and medicine, and will have opportunities to compete for Connecticut State funding for stem cell research, including research on non-federally approved human embryonic stem cell lines. Investigators will also contribute to teaching graduate and/or medical students as well as shaping stem cell research at Yale.

Applicants should mail a three-page research statement and CV, and arrange to have three reference letters sent to:

Haifan Lin, Ph.D., c/o Kristin Dugan
Director’s Office, Yale Stem Cell Center
P.O. Box 208073, Yale University School of Medicine
10 Amistad Street, New Haven CT 06509

Application deadline is December 15, 2007. Follow-up inquiries should be sent to: kristin.dugan@yale.edu

Yale is an affirmative action/equal opportunity employer.
Investigator Recruitment in Genetics and Molecular Biology
National Human Genome Research Institute

The Genetics and Molecular Biology Branch (GMBB) of the National Human Genome Research Institute (NHGRI) is seeking to recruit outstanding tenure-track investigators to pursue innovative, independent research. The faculty within GMBB are highly interactive and use a variety of approaches to understand and develop new treatments for genetic and complex diseases. Current areas of research include hematopoiesis, the genetic disorders of red blood cells, cellular immunology, gene therapy, leukemogenesis, genomic instability in disease, the genetics of skin diseases, and the genetics of the skin microbiome. Of particular interest are candidates with research interests in the following areas:

- Clinical genetics
- Basic genetic/genomics research
- Clinical/translational research
- Application of genomics tools to understanding human disease

The successful candidate will be able to take advantage of interactions with a highly collegial group of scientists within NHGRI and the NIH campus as a whole. In addition, the successful candidate will have access to NHGRI’s outstanding core laboratories, as well as the unparalleled resources of the NIH Clinical Center.

Candidates must have a Ph.D., M.D., or equivalent degree, as well as comprehensive, advanced training and a record of accomplishment in one of the targeted areas. This position includes a generous start-up allowance, an ongoing commitment of research space, laboratory resources, and positions for personnel and trainees.

Interested applicants should submit a curriculum vitae, a three-page description of proposed research, and three letters of recommendation through our online application system, at http://research.nihgri.nih.gov/apply.

The closing date for applications is November 16, 2007.

For more information on GMBB and NHGRI’s Intramural Program, please see http://genome.gov/DIR. Specific questions regarding the recruitment may be directed to Dr. Fabio Candotti, the Search Chair, at fabio@nihgri.nih.gov. Questions may also be directed to Dr. David Bodine, the GMBB Branch Chief, at tedyaz@nihgri.nih.gov.

Interested applicants should also be aware of two concurrent tenure-track faculty searches being conducted by NHGRI’s Cancer Genetics Branch (CGB) and Genetic Disease Research Branch (GDRB). Information on these searches may be found at http://genome.gov/11509039. Qualified candidates are welcome to apply for multiple searches; please note that a separate application must be filed for each search for which you wish to be considered.

Department of Health and Human Services • National Institutes of Health
DHHS and NIH are Equal Opportunity Employers and encourage applications from women and minorities.

Investigator Recruitment in Genetic Disease Research
National Human Genome Research Institute

The Genetic Disease Research Branch (GDRB) of the National Human Genome Research Institute (NHGRI) is seeking to recruit outstanding tenure-track or tenured investigators to pursue innovative, independent research. GDRB faculty members are highly interactive and use a variety of approaches to study the genes and proteins involved in normal development and related disease processes. Investigators in the Branch are currently engaged in studies of limb and skeletal development, pigment cell development and neurocristopathies, T-cell development, function, and defects in host defense; and the role of rare variants in common disease. Of particular interest are candidates with backgrounds in one or more of the following areas:

- Clinical or translational research
- Molecular and genomic approaches to understanding the mechanisms of disease
- Basic genetic or genomic research

The successful candidate will be able to take advantage of interactions with a highly collegial group of scientists within NHGRI and the NIH campus as a whole. In addition, the successful candidate will have access to NHGRI’s outstanding core laboratories, as well as the unparalleled resources of the NIH Clinical Center.

Candidates must have a Ph.D., M.D., or equivalent degree, as well as comprehensive, advanced training and a record of accomplishment in one of the targeted areas. This position includes a generous start-up allowance, an ongoing commitment of research space, laboratory resources, and positions for personnel and trainees.

Interested applicants should submit a curriculum vitae, a three-page description of proposed research, and three letters of recommendation through our online application system, at http://research.nihgri.nih.gov/apply.

The closing date for applications is November 16, 2007.

For more information on GDRB and NHGRI’s Intramural Program, please see http://genome.gov/DIR. Specific questions regarding the recruitment may be directed to Dr. William Pavan, the Search Chair, at bpavan@nihgri.nih.gov. Questions may also be directed to Dr. Leslie Bieskeker, the GDRB Branch Chief, at leslieb@nihgri.nih.gov.

Interested applicants should also be aware of two concurrent tenure-track faculty searches being conducted by NHGRI’s Cancer Genetics Branch (CGB) and Genetics and Molecular Biology Branch (GMBB). Information on these searches may be found at http://genome.gov/11509039. Qualified candidates are welcome to apply for multiple searches; please note that a separate application must be filed for each search for which you wish to be considered.
