TruSeq™

The most accurate next-gen sequencing technology available.

Every Illumina sequencer is powered by TruSeq—the technology that delivers the most accurate human genome at any coverage. TruSeq produces the highest yield of error-free reads. The most bases over Q30. The greatest number of peer-reviewed publications—more than 1,000 in the past three years.

That’s Tru data quality.

Get the proof. Go to www.illumina.com/TruSeq
get your own.

Superior qPCR performance, unbeatable price. Now you don’t have to wait in line to do it. The Eco™ Real-Time PCR system from Illumina delivers high-performance for all standard qPCR applications, including HRM and 4-color multiplex PCR—and it uses standard qPCR chemistries to do it. It’s easy to install and simple to use. Just plug and play. In fact, the Eco Real-Time PCR system gives you better data quality and reproducibility than market leading instruments at a much higher price. The performance you need at a price you can afford. Why share when you can have your own?

Get your own at www.illumina.com/ecoqpcr

Personalize it! Find out how you can personalize your Eco Real-Time PCR System at www.illumina.com/ecoqpcr
First you’ll discover how easy high-productivity qPCR can be.

Who knows what you’ll discover next?

With a streamlined workflow, one-button protocol feature, and intuitive software, the new Viia™ 7 Real-Time PCR System is faster to set up, easier to run, and more convenient to automate than any other qPCR platform. And with the new OpiFlex™ optical system, you’ll have greater dye flexibility for multiplexing than ever before. The end result is high-accuracy data with minimal distraction, which means you can stay focused on what matters most—your research.

For more information, visit www.appliedbiosystems.com/viia7
TWO GENOMIC LEADERS HAVE TEAMED UP TO HELP YOU DIG DEEPER.

APPLY TODAY FOR THE CANCER GWAS GRANT

Fully-funded to help you go further.

Staying on the cutting edge is all about collaboration. That’s why Expression Analysis and Illumina have combined forces to help fuel your cancer research. This fully-funded GWAS includes up to 600 specimens as well as data analysis at absolutely no cost to you. What’s more, all applications will be judged by distinguished members of a prominent cancer society. Register online today.

geneexpression.com/grant  919.405.2248  866.293.6094  •  illumina.com/grant  800.809.4566
Use this?  You need this!

If you have a copy of Molecular Cloning on your shelf, you will certainly want to visit Cold Spring Harbor Protocols online for the latest laboratory techniques.

Cold Spring Harbor Protocols is a response to requests from scientists for authoritative information about techniques with a broad editorial scope, delivered through a state-of-the-art online interface. At the site, you will find methods from Molecular Cloning along with protocols from many best-selling Cold Spring Harbor Laboratory Press manuals, such as Cells and Antibodies, as well as protocols from Cold Spring Harbor’s renowned on-site courses. In addition, you will discover new cutting-edge protocols submitted by and commissioned from laboratories worldwide. A peer-reviewed online journal, Cold Spring Harbor Protocols is indexed in PubMed and updated monthly.

We invite your institution to start a free trial for a hands-on review of Cold Spring Harbor Protocols. To start your online trial, simply visit www.cshprotocols.org and follow the link to request an online trial. Or email us at cshpress@cshl.edu and we will contact your institution’s librarian to arrange free trial access.

Please take the time to review Cold Spring Harbor Protocols. We are confident you and your researchers will find it to be an essential resource.

Prepare Small-RNA Libraries with Greatly Reduced Adaptor-Dimer Background

The ScriptMiner™ Small RNA-Seq Library Preparation Kits provide an improved process for preparing second-generation sequencing libraries from the entire small-RNA transcriptome. The unique enzymatic process* dramatically reduces adaptor dimers that can cause high background in conventional small-RNA library preparations.

- Produce libraries in 1 day from small RNAs such as miRNA and, optionally, small capped RNA.
- Enable directional sequencing of the library.
- Start with total RNA (1-5 μg) or size-selected RNA (100 pg).
- Obtain more comprehensive capture and sequencing of small RNAs, through an optimized ligation process.

Kits for preparing singleplex (nonbarcoded) or multiplex (barcoded) libraries are available.

*Patent pending

Summary of sequencing data from ScriptMiner™ libraries.
BrRR, Brain Reference RNA.

Standard procedure

ScriptMiner™ procedure

The ScriptMiner™ procedure substantially reduces adaptor-dimer background. The indicated RNA samples were used to prepare small-RNA libraries, using either a conventional procedure or the ScriptMiner procedure. Samples were examined by denaturing polyacrylamide gel electrophoresis after 12 cycles of PCR. UHRR, Universal Human Reference RNA; BrRR, Brain Reference RNA.

ScriptSeq™ mRNA Library Preparation Kits are also available. For more information, visit: www.EpiBio.com/rnaseq

Cold Spring Harbor Perspectives in Biology
The Authoritative View

A New Type of Review Journal

Cold Spring Harbor Laboratory Press announces the launch of a new monthly online publication, Cold Spring Harbor Perspectives in Biology. Spanning the complete spectrum of the molecular life sciences, the journal offers article collections that comprehensively survey topics in molecular, cell, and developmental biology, genetics, neuroscience, immunology, cancer biology, and molecular pathology. Written by leading researchers and commissioned by an eminent board of editors, subject collections grow with every issue of the journal. Cold Spring Harbor Perspectives in Biology is thus unmatched in its depth of coverage and represents an essential source for informed surveys and critical discussion of advances in emerging areas of biology.

Scope: Molecular Biology, Cell Biology, Developmental Biology, Genetics, Immunology, Neurobiology
Monthly, online

Subject Coverage
- Angiogenesis
- Antigen Processing
- Apoptosis
- Auxin Signaling
- Axonal Guidance
- The Biology of Cardiovascular Disease
- The Biology of Schizophrenia
- Calcium Signaling
- Cell–Cell Junctions
- Cilia and Flagella
- The Cytoskeleton
- DNA Damage and Repair
- The Extracellular Matrix
- The Endoplasmic Reticulum
- The Evolution of Gene Networks
- Generation and Interpretation of Morphogen Gradients
- Germ Cells
- The Golgi Apparatus
- Growth Factor Receptors
- Immune Cell Signaling
- Immune Tolerance
- Lipid Cell Biology
- Lymphocyte Cell Biology
- Mammary Gland Biology
- Mechanotransduction
- Membrane Fusion and Exocytosis
- Mitochondria
- Mitosis
- Molecular Motors
- Muscle Cell Biology
- The NF-κB Family
- Nuclear Hormone Receptors
- The Nucleus
- The Origin of Life
- The p53 Family
- Prions
- Prokaryote Cell Biology
- Protein Homeostasis
- Receptor Tyrosine Kinases
- Recombination Mechanisms
- Regeneration
- RNA Worlds
- Sex Determination
- Symmetry Breaking in Biology
- Synapses
- Transcriptional Regulation
- Wnt Signaling
- The Y Chromosome

One Lane, One Exome

SeqCap EZ Exome v2.0

Genetic discovery made easier with our highly efficient exome capture method

- Enhanced uniformity by rebalancing 2.1 million probes minimizing sequencing needs to only a single lane while maximizing exome coverage.
- Increased content to cover ~30,000 genes from the latest databases while maintaining single lane sequencing.
- Truly scalable, automation friendly, easy-to-use protocol for any size experiment.

Setting a new standard for exome sequencing:
www.nimblegen.com/EZ

Exome Capture Performance With Single Lane Sequencing: The exome from HapMap sample NA12785 was captured and sequenced with a single 2x75 paired-end lane, generating 18.8 ± 1.9 million reads ($n = 16$) and providing 50.6 ± 4.8 fold average coverage of the target regions. SNP calls from single lane data were compared to HapMap SNPs.

For life science research only. Not for use in diagnostic procedures.

Plant & Animal Genome XIX

The International Conference on the Status of Plant & Animal Genome Research
January 15-19, 2011
Town & Country Hotel, San Diego, California

Speakers
Roger Beachy, USDA/Washington
Joe Ecker, Salk Institute
Ed Green, UC Santa Cruz
Dave Lipman, NCBI, NLM, NIH
Sharon Long, Stanford University
Michael Lynch, Indiana University
Pam Ronald, UC Davis

Workshops
Abiotic Stress
Allele Mining
Animal Epigenetics
Apomixis
Aquaculture
Arthropod Genomics
Banana Genomics
Barley
Bioinformatics
Brachypodium Genomics
Brassicas
Cacao Genome Sequencing
Cassava Genomics
Cattle/Sheep/Swine
Citrus Genome
Coffee
Comparative Genomics
Cool Season Legumes
Cotton Genome Initiative
Cucurbit
Ecological Genomics
Equine
Evolution of Genome Size
Forage & Turf Plants
Forest Tree
Fruit/Nuts
Functional Genomics
Fungal Genomics
Gene Expression Analysis
Genomics Assisted Breeding
Genomics for Disease Resistance
Grape Genome Initiative
Grass Genome Initiative
Host-Microbe Interactions
Large Insert DNA Library
Lolium Genome Initiative
Maize
Molecular Markers
Mutation Screening
Oats
Ornamentals
Phylogenomics
Plant Cytogenetics
Plant Interactions/Pests
Plant Introgression
Plant Reproductive Genomics
Polyploidy
Population & Conservation
Poultry
Proteomics
OTL Cloning
Rice Blast
Rice Functional Genomics
Root Genomics
Sex Chromosomes
Solanaceae
Somatic Genome
Soybean Genomics
Statistical Genomics
Sugar Beet
Sugar Cane
Swine Genome Sequencing
Transposable Element
Weedy & Invasive Plant Genomics
Wheat Genome Sequencing

RNA molecules participate in and regulate a vast array of cellular processes, and the scientific community is now entering a new era in which some aspect of RNA biology—as a tool, a therapeutic, a diagnostic, or part of a fundamental process—is becoming increasingly important. But initiating RNA research can be intimidating, and without a thorough understanding of the challenges and complexities inherent in handling this fragile nucleic acid, forays into the RNA world can be quite frustrating. RNA: A Laboratory Manual provides a broad range of up-to-date techniques so that any investigator can confidently handle RNA and carry out meaningful experiments, from the most basic to the most sophisticated. Originating in four of the field's most prominent laboratories and written with novices as well as more advanced researchers in mind, this manual provides the necessary background and strategies for approaching any RNA investigation in addition to detailed step-by-step protocols and extensive tips and troubleshooting information. RNA: A Laboratory Manual will enable any researcher to approach a wide range of problems with confidence and a high expectation of success.

Due December 2010, 586 pp., illus., appendices, index
Hardcover $240
Paperback $165

ISBN 978-0-87969-90-4
ISBN 978-0-87969-91-1

CONTENTS
Preface
Acknowledgments
CHAPTER 1: THE FUNDAMENTALS
Introduction
Common Sense in Dealing with RNA
Conformance with Methods and When to Use Them
Recovering Purified RNA: Guidelines for Precipitation
Resuspending Precipitated RNA
Assuming the Quantity and Quality of Isolated RNA
after Precipitation
Reversing Ribonuclease Activity
Enrichment of mRNA Using Oligo(dT) Cellulose
Enriching for Species of RNA Other Than mRNAs
Miscellaneous (but Important) General Items

Syllabus

CHAPTER 2: PURIFICATION OF RNA FROM NATURAL SOURCES
Overview
Protocols
1. SDS Solubilization and Phenol Extraction
2. Purification of RNA Using Eriochrome Triphenyl Methane Reagent
3. Ethanol Precipitation of RNA with the Use of Carrier
4. Guidelines for the Use of RNA Purification Kits

Syllabus

CHAPTER 3: PREPARATION OF CYTOSINE-NUCLEOTIDE-RICH RNA FROM Cytosine-Modified DNA
Overview
Protocols

Syllabus

CHAPTER 4: DETECTION AND CHARACTERIZATION OF SPECIFIC RNAs
Overview
Probe Preparation
Northern Blotting
Nucleic Acid Protection
 Primer Extension
Other Methods

Syllabus

CHAPTER 5: SYNTHESIS, PURIFICATION LABELING, AND SUBSTITUTION OF TRANSCRIPTS SYNTHESIZED IN VITRO
Overview
In Vitro Transcription: The Basics
Yield of In Vitro Transcribed (IVT) RNA
Labeling of IVT or In Vitro-Synthesized RNAs

Syllabus

CHAPTER 6: ANALYSIS OF RNA-PROCESSING REACTIONS USING CELL-FREE SYSTEMS
Introduction
Guidelines for the Preparation of Active Cell-Free Systems
Guidelines for Testing and Optimizing Extracts
Developing Cell-Free Systems from Poorly Organized Organisms

Protocols
1. Preparation of Nuclear Enrichment from HeLa Cells
2. Analysis of Pre-miRNA Splicing Using HeLa Cell Nuclear Extracts
3. Preparation of Drosha/K. Cells Nuclear Enzyme for In Vitro Splicing
4. In Vitro Splicing Reactions in Drosha/K. Cell Nuclear Extracts
5. Preparation and Analysis of Cell-Free Splicing Extracts from Saccharomyces cerevisiae
6. Analysis of Splicing in Vitro Using Extracts of Saccharomyces cerevisiae
7. Analysis of Splicing Complexes on Native RNA

Syllabus

CHAPTER 7: RNA INTERFERENCE
Introduction
The Basics
The Design of RNA Experiments: General Considerations and Strategies
RNAi with Long-SiRNA
Protocols
1. siRNA-induced RNAi in Drosha/K. Cells by soaking
2. siRNA-induced RNAi in Drosha/K. Cells by transfection
3. dsRNA-induced RNAi in C. elegans by feeding with dsRNA-expressing E. coli
4. RNAi in C. elegans by injection of dsRNA
5. RNAi in C. elegans by injection of dsRNA
6. Culture of mammalian cells Using synthetic siRNAs
7. Construction of Transgenic Drosha/K. Expressing dsiRNAs in the mR1 Bakchrov
8. Creation of mR1-based dsRNA Vector
9. Packaging siRNA Bacteriophage and Host Cell Infection
10. Infection of Mammalian Cells with Renovirus dsiRNAs
11. Creating Emergent eDNA Mice by Recombinant mediated Gene Capture

Syllabus

APPENDIXES
Companion Website
Quick Reference for Experiments Commonly Used in RNA Research

Protocols
1. RNA-friendly Plasmid Preparation
2. Preparing Cell-free DNA from Nuclei or Whole Cells
3. Expression and Purification of Acetoamidase T7 RNA Polymerase from E. coli
4. Preparing Size Markers for Gel Electrophoresis
5. Etching
6. Gel Electrophoresis
7. Southern Blotting
8. Northern Blotting
9. Montage
10. Blotting
