Research

The evolution of duplicate gene expression in mammalian organs 1461
Katerina Guschanski, Maria Warnefors, and Henrik Kaessmann

Genome-scale mutational signatures of aflatoxin in cells, mice, and human tumors 1475OA
Mi Ni Huang, Willie Yu, Wei Wei Teoh, Maude Ardin, Apinya Jusakul, Alvin Wei Tian Ng,
Arnoud Boot, Behnoush Abedi-Ardekani, Stephanie Villar, Swe Swe Myint, Rashidah Othman,
Song Ling Poon, Adriana Heguy, Magali Olivier, Monica Hollstein, Patrick Tan, Bin Tean Teh,
Kanaga Sabapathy, Jiri Zavadil, and Steven G. Rozen

Yeast genetic interaction screen of human genes associated with amyotrophic lateral sclerosis:
identification of MAP2K5 kinase as a potential drug target 1487OA
Myungjin Jo, Ah Young Chung, Nozomu Yachie, Minchul Seo, Hyejin Jeon, Youngpyo Nam,
Yeojin Seo, Eunmi Kim, Quan Zhong, Marc Vidal, Hae Chul Park, Frederick P. Roth,
and Kyoungho Suk

HOXA1 and TALE proteins display cross-regulatory interactions and form a combinatorial
binding code on HOXA1 targets 1501
Bony De Kumar, Hugo J. Parker, Ariel Paulson, Mark E. Parrish, Irina Pushel, Narendra Pratap Singh,
Ying Zhang, Brian D. Slaughter, Jay R. Unruh, Laurence Florens, Julia Zeitlinger, and Robb Krumlauf

Recruitment of histone modifications to assist mRNA dosage maintenance after degeneration
of cytosine DNA methylation during animal evolution 1513
Andrew Ying-Fei Chang and Ben-Yang Liao

Trans-splicing enhances translational efficiency in C. elegans 1525
Yu-Fei Yang, Xiaqing Zhang, Xuehua Ma, Taolan Zhao, Qiushi Sun, Qing Huan, Shaohuan Wu,
Zhuo Du, and Wenfeng Qian

Rapid evolution of female-biased genes among four species of Anopheles malaria mosquitoes 1536OA
Francesco Papa, Nikolai Windbichler, Robert M. Waterhouse, Alessia Cagnetti, Rocco D’Amato,
Tania Persampieri, Mara K.N. Lawniczak, Tony Nolan, and Philippos Aris Papathanos

A genome-wide transcriptome and translatome analysis of Arabidopsis transposons identifies
a unique and conserved genome expression strategy for Ty1/Copia retroelements 1549
Stefan Oberlin, Alexis Sarazin, Clément Chevalier, Olivier Voinnet, and Arturo Mari-Ordóñez

Methods

Detecting ancient positive selection in humans using extended lineage sorting 1563OA
Stéphane Peyrégne, Michael James Boyle, Michael Dannemann, and Kay Prüfer

(continued)
HIT’nDRIVE: patient-specific multidriver gene prioritization for precision oncology

Statistically robust methylation calling for whole-transcriptome bisulfite sequencing reveals distinct methylation patterns for mouse RNAs
Carine Legrand, Francesca Tuorto, Mark Hartmann, Reinhard Liebers, Dominik Jacob, Mark Helm, and Frank Lyko

Resources
Assembly and analysis of 100 full MHC haplotypes from the Danish population
Jacob M. Jensen, Palle Villesen, Rune M. Friborg, The Danish Pan-Genome Consortium, Thomas Mailund, Søren Besenbacher, and Mikkel H. Schierup

Annotation and cluster analysis of spatiotemporal- and sex-related lncRNA expression in rhesus macaque brain
Siling Liu, Zhengbo Wang, Dong Chen, Bowen Zhang, Ren-Rong Tian, Jing Wu, Ying Zhang, Kaiyu Xu, Liu-Meng Yang, Chao Cheng, Jian Ma, Longbao Lv, Yong-Tang Zheng, Xintian Hu, Yi Zhang, Xiangting Wang, and Jiali Li

Corrigenda
Corrigendum: The evolution of African great ape subtelomeric heterochromatin and the fusion of human chromosome 2
Mario Ventura, Claudia R. Catacchio, Saba Sajjadian, Laura Vives, Peter H. Sudmant, Tomas Marques-Bonet, Tina A. Graves, Richard K. Wilson, and Evan E. Eichler

Corrigendum: Transcriptome analyses of rhesus monkey preimplantation embryos reveal a reduced capacity for DNA double-strand break repair in primate oocytes and early embryos
Xinyi Wang, Denghui Liu, Dajian He, Shengbao Suo, Xian Xia, Xiechao He, Jing-Dong J. Han, and Ping Zheng

Corrigendum: Building a genomic framework for prospective MRSA surveillance in the United Kingdom and the Republic of Ireland

Cover Natural selection shaped some of the traits that set present-day humans apart from their extinct relatives, Neandertals and Denisovans. In this issue, Peyrégne et al. describe a method to identify the signatures left in the genome by these selective events. The cover portrays the genealogical history that relates archaic and modern humans for a region in the genome where selection took place. Each dot represents an individual connected to its ancestors and descendants by lines. Along the branch that gives rise to present-day humans, a new advantageous sequence variant emerged (red) that spread rapidly through the population and is now fixed among all living humans. (Digital artwork by Stéphane Peyrégne. [For details, see Peyrégne et al., pp. 1563–1572.])
