The new GeneAmp® XL PCR Kit makes generating long PCR products a routine procedure. In fact, we QC test the kit for 20 kb using lambda DNA.

Our new rTth DNA Polymerase, XL, in combination with a novel reaction buffer, creates optimal conditions for generating long PCR products with high reproducibility and specificity.

What’s more, the GeneAmp XL PCR Kit is optimized on GeneAmp® PCR Instrument Systems, and backed by our PCR performance guarantee. It’s just as convenient as our other PCR kits, and opens up new possibilities for mapping, sequencing and genome analysis.

The integrated resources of our Applied Biosystems Division offer you the most comprehensive range of systems, technologies and support in PCR, nucleic acid synthesis, genetic analysis and protein research.

The GeneAmp XL PCR Kit—a major breakthrough in PCR technology. To order in the U.S., call 1-800-327-3002. For PCR technical support, call 1-800-762-4001. For more information, call 1-800-345-5224. Outside the U.S., contact your local Perkin-Elmer representative.

RESEARCH

1 A New Diagnostic Test for Gaucher Disease Suitable for Population Screening
   Sameer A. Sakallah, Carol Sansieri, David W. Kopp, David L. Cooper, and
   John A. Barranger

6 Development of a Sensitive PCR to Detect Allele Loss in a Model Hematopoietic Neoplasm
   Jeffrey Fairman, David Claxton, Cheryl L. Willman, Albert B. Deisseroth, and
   Lalitha Nagarajan

13 Determining Relative Microsatellite Allele Frequencies in Pooled DNA Samples
   H. Khatib, A. Darvasi, Y. Plotski, and M. Soller

19 PCR with End Trimming and Cassette Ligation: A Rapid Method to Clone Exon–Intron Boundaries and a 5’-upstream Sequence of Genomic DNA Based on a cDNA Sequence
   Hiroyuki Iwahana, Toshiyuki Tsujisawa, Rumi Katashima, Katsuhiko Yoshimoto, and Mitsuo Itakura

26 A Novel Method to Quantitate Methylation of Specific Genomic Regions
   Mervi Heiskanen, Ann-Christine Syvännä, Harri Siltari, Sinikka Laine, and Aarno Palotie

31 Computing Genetic Similarity Coefficients from RAPD Data: The Effects of PCR Artifacts
   Warren F. Lamboy

38 Computing Genetic Similarity Coefficients from RAPD Data: Correcting for the Effects of PCR Artifacts Caused by Variation in Experimental Conditions
   Warren F. Lamboy

TECHNICAL TIPS

44 PCR-based Method to Map the Bending Locus of DNA Molecules
   Fernando Valle

46 A Simple PCR Method for Screening cDNA Libraries
   Dominique Aflandari and Thierry Darribère

50 Comparison of Gel Matrices for Resolving PCR-amplified DNA Fingerprint Profiles
   Guohao He, C. S. Prakash, Robert L. Jarret, Sadik Tuzun, and Jiansheng Qiu

52 A Nonisotopic Single-strand Conformation Polymorphism Protocol Using a Direct Blotting Electrophoresis, a Chemiluminescent Detection System, and a Multiplex Approach
   Hans Knoblauch, Norbert Weiss, Irmgard Eggersdorfer, Christiane Keller, and Herbert Schuster

56 A DNA Extraction Method that Allows Reliable PCR Amplification of MLO DNA from “Difficult” Plant Host Species
   Karen Gibb and Anna Padovan

59 Buffer Components Tailor DNA Amplification with Arbitrary Primers
   G. Caetano-Anollés, B.J. Bassam, and P.M. Gresshoff

(continued)
Reverse Transcriptase Can Inhibit PCR and Stimulate Primer–Dimer Formation
Konstantin M. Chumakov
