Supplemental_Figure_S5. Zoom-in of Figure 2 showing the structure and 4C-seq intra-chromosomal contact profiles of the BCAR3 viewpoints.

Tracks ordered from top to bottom are: genes, C- and L-HAC sequence blocks, 4C-seq contact profiles of the viewpoint within BCAR3 gene. The gene-rich segments are highlighted in green; gene desert and gene-poor segments in red and yellow, respectively. Y-axis value is set to maximum of hundred. Note that BCAR3 viewpoint has contacts preferably within gene-rich segment and very little contacts with gene desert and gene-poor segments.
