

Cold Spring Harbor Protocols

Subject Coverage

Antibodies
Bioinformatics/Genomics
Cell Biology
Chromatography
Computational Biology
DNA Delivery/Gene Transfer
Electrophoresis
Genetics
High Throughput Analysis
Imaging/Microscopy
Immunology
Laboratory Organisms
Molecular Biology
Neuroscience
Plant Biology
Polymerase Chain Reaction (PCR)
Proteins and Proteomics
RNA Interference (RNAi)/siRNA
Stem Cells
Transgenic Technology

Lights, Camera, Methods!

Now you can see results of the finest methods in action with new online movies in *CSH Protocols*.

The November issue of *CSH Protocols* features methods for tracking RNA and protein molecules in both cells and organisms, and introduces new multimedia content made possible by online presentation: movies showing examples of these techniques in action.

Read—and see—these newly featured protocols online at www.cshprotocols.org:

- Photoactivation-Based Labeling and In Vivo Tracking of RNA Molecules in the Nucleus
- Selection of Appropriate Imaging Equipment and Methodology for Live Cell Imaging in *Drosophila*

CSH Protocols offers cutting edge and classic protocols in molecular and cell biology from laboratories worldwide, along with methods from Cold Spring Harbor Laboratory's renowned manuals and on-site courses. Free trials and discounted subscriptions are available for a limited time.

CSH Protocols is created by Cold Spring Harbor Laboratory Press in association with HighWire Press of Stanford University.

TIMES OF TRIUMPH, TIMES OF DOUBT

SCIENCE AND THE BATTLE FOR PUBLIC TRUST

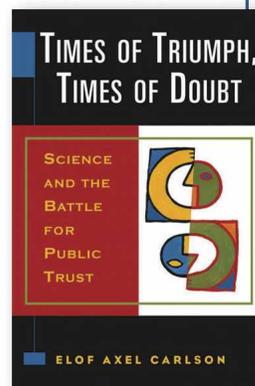

By Elof Axel Carlson, *Professor Emeritus, State University of New York at Stony Brook*

The intent and uses of science are a continuing preoccupation, especially in public debates on issues such as new pharmaceuticals, cloning, stem cells, genetically modified foods, and assisted reproduction. *Times of Triumph, Times of Doubt*, written by the eminent geneticist and historian Elof Carlson, explores the moral foundations of science and their role in these hot-button issues. Carlson chooses a variety of case histories and describes their scientific background and the part played by scientists in the application of their work, including their motivations and reactions to bad outcomes, both real and alleged. He examines why ethical lapses have occurred in these areas, why bad things happen when, for the most part, those who worked on the science had only good intentions in mind, and how such lapses can be prevented from occurring in the future. This exploration of ethics and science is important reading for those interested in issues of science and society, including journalists, theologians, legislators, lawyers, and scientists themselves.

2006, 227 pp., index

Hardcover \$39

ISBN 0-87969-805-5

CONTENTS

Introduction

PART 1: THE DIVERSE MORAL AND ETHICAL FOUNDATIONS OF BASIC AND APPLIED SCIENCE

1. Why Science Is Sometimes Perceived as Evil
2. The Tools of Judgment: Ethics and Moral Traditions

PART 2: THE ROLE OF THE STATE IN SHAPING SCIENCE

3. Evil at Its Worst: Nazi Medicine and Biology
4. The Banality of Evil: The Careers of Charles Davenport and Harry Laughlin
5. Heroes with Feet of Clay: Francis Galton and Harry Clay Sharp

PART 3: WARTIME AND THE THREAT OF WAR AS JUSTIFICATION FOR SUSPENDING ETHICAL AND MORAL BEHAVIOR BY SCIENTISTS

6. Radiation in Peace and War
7. Herbicides in Peace and War

PART 4: REGULATION OF SCIENCE TO PROTECT INDIVIDUAL AND PUBLIC HEALTH

8. Thalidomide—Corporate Misconduct Masquerading as an Act of God

9. A Synthetic Estrogen with Harmful Outcomes

PART 5: THE NECESSITY OF REGULATION TO PROTECT THE ENVIRONMENT

10. Pesticides and the Environmental Movement
11. Genetically Modified Foods—As Usual

PART 6: BASIC AND APPLIED RESEARCH IN MEDICINE

12. Medical Deception and Syphilis
13. Prenatal Diagnosis and an Alleged Eugenics through the Back Door
14. Cloning, Stem Cells, Hyperbole, and Cant
15. Assisted Reproduction and the Argument of Playing God

PART 7: ASSESSING BAD OUTCOMES

16. Quantifying Evil or Bad Outcomes
17. Science, History, and Responsibility
18. How Science Changes Our Worldview for the Better
19. How Can Good Intentions Avoid Bad Outcomes?

focus on discovery.

Discover More with the World's Finest Full-Length Clone Collection

The Mammalian Gene Collection (MGC) is quite simply the best clone collection in the world, brought to you by the greatest minds in genomic research. Generated and sequenced by a consortium of leading NIH funded laboratories, our cDNA resource contains a complete open reading frame (ORF) for every human, mouse, and rat gene represented. The power of discovery is at your fingertips.

- Every MGC clone is fully sequenced with complete ORF
- Assay-ready DNA in microplate format upon request
- Online clone query quickly identifies the clone you need

"Open Biosystems' MGC collection is an invaluable resource for CCSB, the Dana-Farber Center for Cancer Systems Biology. It has cut years off the development of a human protein-protein interaction map."

Marc Vidal
Dana-Farber Cancer Institute

GENOMICS • RNAi • PROTEOMICS
express repress detect

One Assay. Infinite Possibilities.

With Infinium® Whole-Genome Genotyping you get:

- A complete solution from whole-genome association studies to targeted applications, fine mapping, and custom genotyping.
- The most comprehensive genomic coverage across multiple populations.
- More information value at every locus, with call rates greater than 99%.
- LOH and DNA copy number analysis using matched samples on a single array.

See what Infinium can do for you.

effortless at any scale.

K. lactis Protein Expression Kit from New England Biolabs

YEAST PROTEIN EXPRESSION MADE EASY

The *K. lactis* Protein Expression Kit provides a simple method to clone and express your gene of interest in the yeast *Kluyveromyces lactis*. This system offers many advantages over bacterial systems and eliminates the methanol containing medium and antibiotic requirements of *Pichia pastoris*. With easy-to-use protocols and highly competent *K. lactis* cells included, this system can take you from bench top to large scale production with ease.

Advantages:

- High yield protein expression
- Rapid high cell density growth
- Methanol-free growth media
- Plasmid integration enhances stability
- Acetamide selection enriches for multi-copy integrants, enhancing yield
- Tight control of gene expression enables expression of toxic genes
- Access to eukaryotic protein folding and glycosylation machinery
- Simultaneous expression of multiple proteins
- Ease-of-use for those inexperienced with yeast systems
- Yeast competent cells included
- No license required for research use

BIO SUPPLYNET

A Current, Integrated Information Source
for Life Science Laboratory Supplies

BIO SUPPLYNET

Find A Kit

Many suppliers offer time and effort saving kits to perform research techniques. Search our exclusive database of available research kits.

BioToolKit

An annotated directory of over 1000 links to online molecular biology resources, including basic research tools and advanced applications for genome, transcriptome, and proteome data retrieval, analysis, and visualization.

Featured Subject Areas

Download free protocols, background information and find suppliers for reagents and equipment for the hottest fast-growing research methods and areas of interest.

Featured Protocols

Download free protocols from Cold Spring Harbor Laboratory Press manuals, and find sources for the reagents and equipment needed.

Career Center

Find or place listings for available positions in academic research, pharmaceutical companies, clinical research facilities, and the biotechnology industry.

Searching

Searching is very convenient. Info on over 20,000 products from over 6,500 suppliers is right at your finger tips.

CSHL Press Announces the New and Improved BioSupplyNet.com!

- CSHL Press has relaunched BioSupplyNet, adding new features and improved functionality
- SAVE TIME! No need to search through stacks of catalogs and numerous websites
- Over 20,000 products and supplies listed (indexed by type and/or by company)
- Over 6,500 prominent suppliers participating and the number continues to grow
- Searching is FAST and EASY
- NO REGISTRATION necessary

In addition to searching for products, Scientists can quickly:

- Get immediate inside info about new products and special deals
- Find kits to perform research techniques
- Visit Featured Subject Areas containing background info, free protocols, hottest fast-growing research methods and more! Now featuring PCR and RNAi
- Download free protocols from Cold Spring Harbor Laboratory Press manuals
- Visit our Career Center to search and post job listings
- Get up to the minute Science news
- Order Catalogs
- Sign up for Newsletters

CAREER TRACKS

Dedicated entirely to Employment, Conferences, Meetings, Fellowships, and Grants

Postdoctoral positions at Cold Spring Harbor Laboratory applying Next-Generation Sequencing to Cognitive Disorders

Postdoctoral researchers are sought for a large-scale effort to use genomic technologies to understand the biological basis of cognitive disorders. Many efforts over the past several years have identified candidate genes and genomic regions associated with schizophrenia, autism, and other disorders. Cold Spring Harbor Laboratory is launching a multi-investigator, multidisciplinary effort to use next-generation sequencing technologies to drive forward from candidate genes and candidate regions of the genome to causative mutations that underlie cognitive diseases. This effort will be led by James Watson, Jonathan Sebat, W. Richard McCombie, and Greg Hannon. Fellows will be co-supervised in this interactive program. The team is now seeking to fill a number of postdoctoral positions with researchers having experience in either molecular biology and biochemistry or informatics and bioinformatics. A familiarity with cognitive disease is desired but not essential.

Cold Spring Harbor Laboratory is a world-renowned research and educational institution with programs in cancer, neuroscience, plant biology, genomics and bioinformatics. The Laboratory is recognized internationally for its excellence in research and educational activities.

Please send a cover letter outlining your research interests and suitability for the position, CV and names of three references to:

Email: mccombie@cschl.edu

W. Richard Mc Combie, Ph. D
Cold Spring Harbor Laboratory,

Postdoctoral Position in the Department of Biochemistry and Biophysics at Texas A&M University.

An NIH-funded post-doctoral position is immediately available to study trypanosome RNA editing catalyzed by a mutisubunit complex termed the ³editosome². Ongoing research includes investigation of the organization of RNA-protein interactions in assembled editosomes. Independent and enthusiastic candidates with a strong background in molecular biology and biochemistry are encouraged to apply. The fellowship (\$45,000-50,000) is for three years, or longer depending on funding. Applicants are encouraged to informally contact the head of the group, Jorge Cruz-Reyes for more information on the projects. Please send a curriculum vitae and the names and addresses of two references by email or regular mail to:

Dr. Jorge Cruz-Reyes
Assistant Professor
Department of Biochemistry and Biophysics
Texas A&M University

Genome Research **seeks an Assistant Editor**

Genome Research is an international, continuously published, peer-reviewed journal that focuses on research that provides novel insights into the genome biology of all organisms, including advances in genomic medicine. The journal was launched in August 1995 by Cold Spring Harbor Laboratory (CSHL) Press and is currently ranked fourth among all primary research genetics publications, second in biotechnology, and in the top ten of all biochemistry and molecular biology publications.

Cold Spring Harbor Laboratory Press seeks a scientist interested in making a career in the communication of science to fill the position of Assistant Editor at *Genome Research*.

The applicant must have, or be about to receive, a Ph.D. in the biological sciences, preferably with experience in genetics and genomic science. The successful candidate will assist the Executive Editor of the journal in manuscript selection and negotiation with authors, peer reviewers, and Editorial Board members; commissioning reviews and features; representing the journal at conferences; and identifying emerging trends. Strong communication and organizational skills, creativity, ability to meet deadlines, and the capacity to handle many projects at once are significant requirements. Broad interests in science and experience in the communication of science would be helpful. We seek a team player with energy, enthusiasm, and excellent interpersonal skills who is comfortable interacting with scientists at all levels.

CSHL Press is affiliated with Cold Spring Harbor Laboratory, located on the North Shore of Long Island, 35 miles from New York City. We offer a competitive salary and benefits package.

Please submit a curriculum vitae and a cover letter explaining your interest in the position to:

**Human Resources Department
Cold Spring Harbor Laboratory
1 Bungtown Road
Cold Spring Harbor, NY 11724
