

Omni – \Om"ni-\ [L. *omnis* all.]
Omni – /Om"nɪ-/ [Γ· *omnis* all.]

Denoting all, everything, universal;
as in the HumanOmni1-Quad.

Have it all without compromise:
the best content at an affordable price.

- More than one million markers per sample for superior coverage of tag SNPs, genes, and indels
- The first microarray with content from the 1,000 Genomes Project
- Genome-wide coverage of common and rare CNVs
- More than 30,000 coding and non-synonymous SNPs

Best-in-Class, Real-Time PCR Solutions. Specific for my research.

Only Applied Biosystems delivers the highest-quality, best-in-class workflow solutions for all of your real-time PCR applications. With built-in flexibility, our systems adapt to meet your specific research needs. With 25 years of proven quality, we have the experience you need to bring superior data into your lab. When you want a real-time portfolio that can take your research to the next level, talk to the experts.

As Flexible as You Want to Be.

AB Applied Biosystems

The highest-quality, real-time PCR solutions optimized just for you at www.appliedbiosystems.com/realtimesystems

What a Time I Am Having

SELECTED LETTERS OF MAX PERUTZ

Edited by **Vivien Perutz** with a memoir by **David Blow**

Selected by his daughter, Vivien, from Max Perutz's voluminous correspondence, the letters reproduced here portray their author with a spontaneity and directness no autobiography could have matched. They chronicle Perutz's adventurous life through his own vivid, erudite and humorous pen, documenting the hopes, roadblocks and moments of elation of his sixty-year quest to understand the molecular biology of hemoglobin. The first great step in this quest — unraveling the molecular structure of hemoglobin — earned Perutz the 1962 Nobel Prize in Chemistry. Narrated against a backdrop of family and friends, politics and war, literature, travels, and Max's beloved mountains, these letters provide rare insight into the thoughts of a remarkable and very human scientist, and delightful sketches of some of the people he encountered. Starting with lively letters to a girlfriend written in his youth in Vienna and the impressions of a young scientist in Cambridge, the letters progress to the desperate pleas of an "enemy alien" interned in Canada during World War II. The diary of Perutz's subsequent super-secret war work for the British to build a floating ice airstrip in the North Atlantic, ardent campaigning letters to scientists and politicians, and self-deprecating stories of his own mishaps written to amuse his children and grandchildren are some of the many highlights of these fascinating letters, unique in the annals of recent scientific history. This book is a companion to Georgina Ferry's *Max Perutz and the Secret of Life*. Together these volumes provide a portrait of an extraordinary character in the development of molecular biology.

Cold Spring Harbor Perspectives in Biology

The Authoritative View

NEW!

www.cshperspectives.org

Cold Spring Harbor Laboratory Press announces the launch of a new monthly online publication, *Cold Spring Harbor Perspectives in Biology* (*CSH Perspectives*). *CSH Perspectives* provides the life science community with authoritative reviews of progress in emerging areas of molecular, cell, and developmental biology, genetics, evolutionary biology, neuroscience, cancer biology, and molecular pathology. The contributions are written by leading researchers in each field and commissioned by a board of eminent academic editors, all of whom are acknowledged to be key figures in their particular field. *CSH Perspectives* is unmatched in its depth of coverage and represents an essential source for informed surveys and critical discussion of advances in the molecular life sciences.

Scope: Molecular Biology, Cell Biology, Developmental Biology, Genetics, Neurobiology, Molecular Pathology

Unleash the full potential

**For fast scans, high-quality data
and consistent research results**

Optimized for NimbleGen Microarray Applications

CGH
ChIP-chip
DNA Methylation
Gene Expression

The unique combination of high-density NimbleGen microarrays and the high-resolution scanning of the MS 200 provides the sensitivity to comprehensively detect genome-wide CNVs. Analysis of a complex CNV region in chromosome 17 in a Burkitt Lymphoma research sample referenced against normal male genomic DNA. An ~382kb deletion region and an ~35kb amplification region are detected using the NimbleGen Human CGH 2.1M Whole-Genome Tiling v2.0D array and the MS 200 at 2 μ m resolution.

For life science research only. Not for use in diagnostic procedures.

of NimbleGen microarrays...

Introducing the NimbleGen **MS 200 Microarray Scanner**

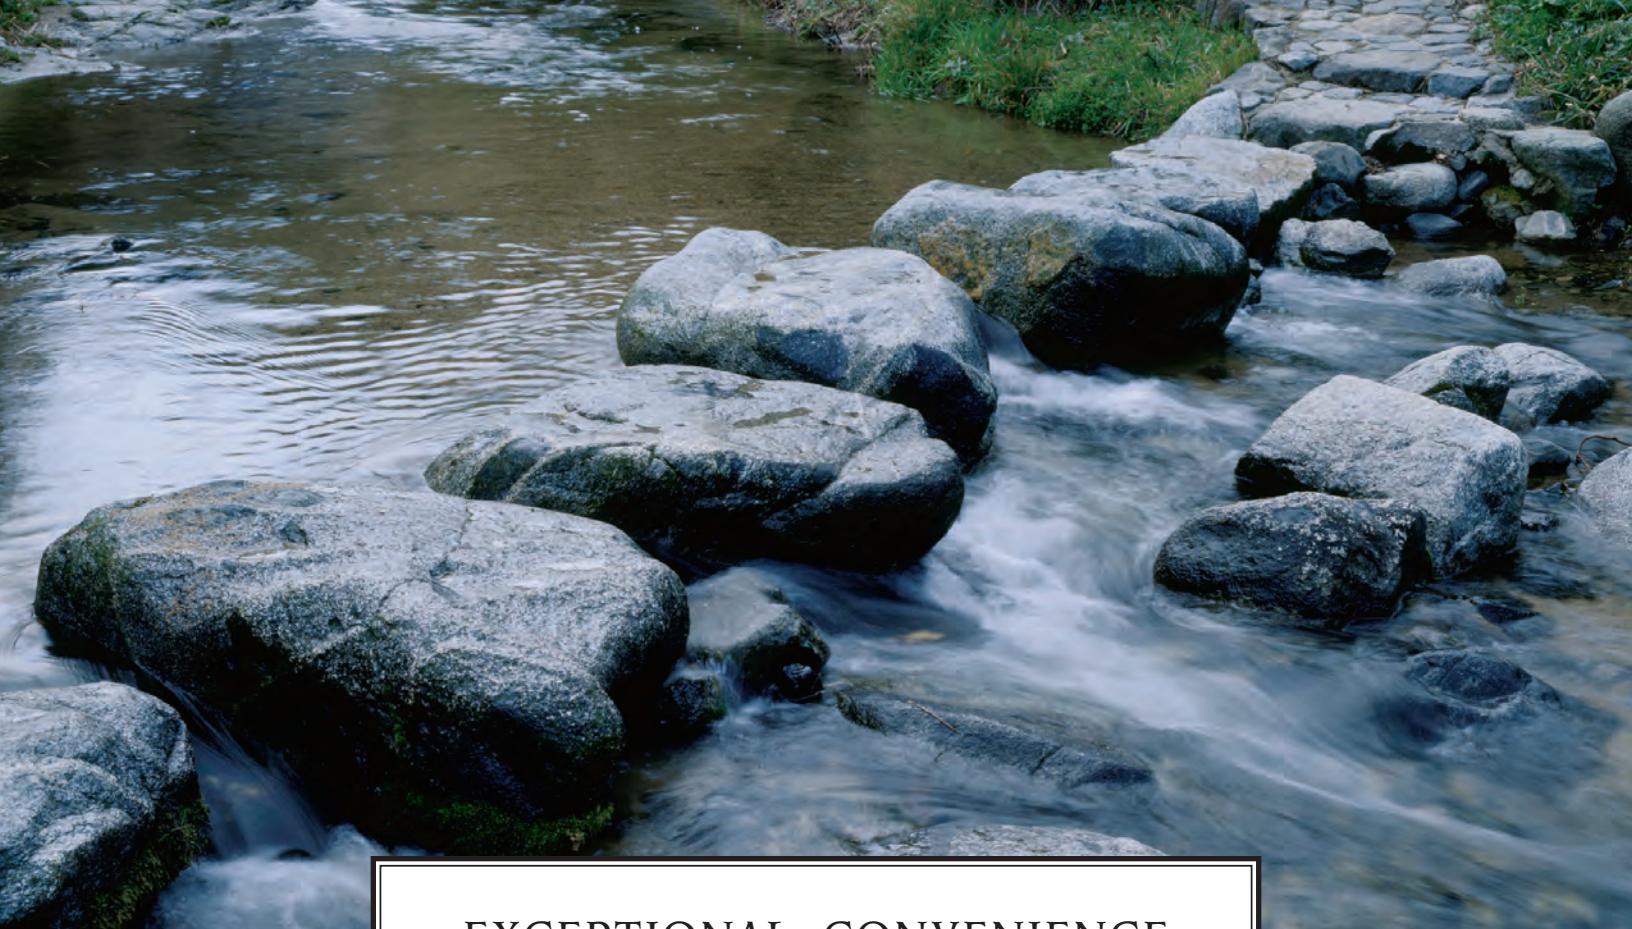

The NimbleGen MS 200 reveals the complete picture of high-density NimbleGen microarrays (up to 2.1 million probes) with powerful scanning resolution down to 2 μ m and increased sensitivity. Scan with certainty using the MS 200 to achieve high-quality data from NimbleGen single and multiplex arrays while ensuring compatibility with the next-generation arrays of tomorrow.

- **Enhanced Data Quality:** High signal-to-noise ratio combined with advanced autofocus and autogain ensures optimal results.
- **Maximum Throughput:** 48-slide autoloader processes up to 576 samples in a single run using multiplex arrays.
- **Integrated Workflow:** Optimized for all current and next-generation NimbleGen arrays to provide maximum application flexibility.

EXCEPTIONAL CONVENIENCE

Restriction Enzymes from New England Biolabs

With 35 years of experience in enzyme technology, New England Biolabs offers unmatched convenience when selecting a restriction enzyme. With over 160 enzymes recommended for use in a single buffer, reactions can be set up quickly and easily. For additional flexibility, try a High Fidelity (HF) enzyme with reduced star activity. Reaction times can be shortened to as little as 5 minutes using one of our Time-Saver qualified enzymes. With over 220 specificities to choose from, NEB enzymes deliver convenience you can count on.

The convenience of NEB Restriction Enzymes*

222	
222 specificities	
NEB4	162
162 recommended in NEBuffer 4	
5	153
153 Time-Saver qualified (5 minute digests)	
37°	172
172 recommended at 37°C	

* As of 3/26/09

Advantages:

- **Selection** – More specificities than any other supplier
- **Convenience** – Optimal activity for over 160 enzymes in a single buffer NEB4
- **Quality** – State-of-the-art production and stringent QCs
- **Innovation** – HF enzymes engineered for reduced star activity
- **Performance** – Guaranteed

USB ExoSAP-IT single-step PCR cleanup saves valuable time.

ExoSAP-IT® single-step PCR cleanup saves time and money, making it more efficient than column purification.

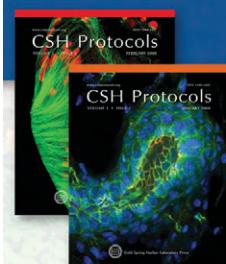

ExoSAP-IT reagent takes PCR reactions straight to sequencing, so you can avoid the hassle of columns. ExoSAP-IT PCR cleanup removes primers and nucleotides from PCR reactions, ensuring quality sequencing results. And, because ExoSAP-IT reagent only requires a single pipetting step, you spend less time processing columns and more time processing results.

To discover how ExoSAP-IT PCR cleanup can add value to your research, call 800-321-9322 or go to www.usbweb.com/singlestep

Cold Spring Harbor Protocols

Online. Authoritative. Indispensable.

- The online source of trusted techniques in molecular and cell biology
- Frequently updated and annotated

- Contains cutting-edge and classic protocols presented step-by-step with cautions and troubleshooting
- Interactive, customizable, and fully searchable

Cold Spring Harbor Laboratory is renowned for its teaching of biomedical research techniques. For decades, participants in its celebrated, hands-on courses and users of its laboratory manuals have gained access to the most authoritative and reliable methods in molecular and cellular biology. Now that access has moved online.

Visit *Cold Spring Harbor Protocols* today and discover a rich, interactive source of new and classic research techniques. The site is fully searchable, with many tools that can be customized by users, including topic-based alerting and personal folders. Through a web-based editorial process, users also have the opportunity to add refereed comments to each protocol. Links in the online protocols offer additional resources and step-by-step instructions print out in a convenient form, complete with materials, cautions, and troubleshooting advice. Each protocol is citable, presented, and edited in the style that has made *Molecular Cloning, Antibodies, Cells*,

and many other Cold Spring Harbor manuals essential to the work of scientists worldwide. The current collection of more than 1000 protocols is continuously expanded, updated, and annotated by the originators and users of the techniques.

NEW to CSH Protocols:

Emerging Model Organisms, a full-fledged guide to the use of new model systems in the laboratory, covering husbandry, genetics, genomics and basic protocols.

CSH Protocols is created by Cold Spring Harbor Laboratory Press in association with HighWire Press of Stanford University.

Catch What You've Been Missing

New...NimbleGen Human CGH 3x720K Whole-Genome Arrays

Analysis of a Complex CNV Region in Chromosome 17 in a Burkitt Lymphoma Research Sample Referenced against Normal Genomic DNA. An ~382kb deletion region and an ~35kb amplification region are easily detected using the NimbleGen Human CGH 3x720K Whole-Genome Tiling v3.0 array and the NimbleGen MS 200 Microarray Scanner at 2 μ m resolution. The combination of high-density NimbleGen microarrays and the high-resolution scanning of the MS 200 provides sensitivity to comprehensively detect genome-wide CNVs.

- Catch Copy Number Variants Genome-Wide**
Comprehensively detect CNVs with 720,000 probes per sample and enhanced coverage of low-copy repeat regions of the genome (e.g. segmental duplications).
- Increase Throughput, Decrease Costs**
NimbleGen 3x720k arrays enable simultaneous analysis of 3 samples on a single slide, providing increased throughput and cost-effective analysis.

Discover the NimbleGen Difference

The proof is in our data. See how NimbleGen Human CGH 3x720K Whole-Genome Tiling and Exon-Focused Arrays compare to your current technology.

Dedicated entirely to Employment, Conferences, Meetings, Fellowships, and Grants

Associate or Full Professor

The Institute of Human Virology (IHV) and the Institute for Genome Sciences (IGS), in conjunction with the Marlene and Stewart Greenebaum Cancer Center at the University of Maryland School of Medicine, are searching for a faculty candidate to direct a new Division of Oncological Genomics. The new division will be located in the IHV, and coupled with full appointments in IHV and IGS, will have the ability to recruit junior faculty to support its mission. The appointment will be either at the Associate or Full Professor level commensurate with experience.

The successful candidate will have extramural funding and a track record of conducting independent and collaborative research using approaches that include genomics and bioinformatics, as well as an interest in the field of cancer. The candidate will work closely with tumor cell biologists, molecular biologists, immunologists, and epidemiologists in the IHV to identify high-risk individuals and cancers that may have an infectious etiology. Particular emphasis will be placed on cancer associated with adventitious agents, especially viruses, and the candidate will use appropriate genomics and bioinformatics approaches to identify such agents in tumors, in the tumor microenvironment, and in individuals at high risk for specific cancers. The qualified individual will have publications utilizing genomics that may be applicable to human cancer. The cancers of interest in this institute are those occurring in the context of HIV or Hepatitis C infection and include cancer of the lung, kidney, liver, ovary, prostate, brain, leukemia, lymphoma and epithelial cells. The qualified individual will have familiarity with genomic applications such as transcriptional profiling, genotyping, tiling arrays, exon throughput assays, methylation, real time PCR, microRNA analyses and automated high throughput assays, and be aware of technology leading to detection of other agents, including possibly novel ones.

IHV and IGS offer excellent laboratory facilities, competitive salary and startup packages, and access to numerous resources within the School of Medicine including state-of-the-art BSL3/ABSL3 facilities and a large-scale DNA sequencing and analysis core in a strong academic environment.

The faculty search committee will be co-chaired by Dr. Robert Gallo, Director of IHV, and Dr. Claire Fraser-Liggett, Director of IGS.

Please submit a letter of interest, CV and three references to:

CONTROL AND REGULATION OF STEM CELLS

Cold Spring Harbor Symposia on Quantitative Biology, Volume LXXIII

Control and
Regulation
of Stem Cells

Meeting organized by Bruce Stillman, David Stewart, and Terri Grodzicker, *Cold Spring Harbor Laboratory*

Based on presentations by world-renowned investigators at the 73rd annual Cold Spring Harbor Symposium on Quantitative Biology, this volume reviews the latest advances in research on the control and regulation of stem cells. The topics covered include nuclear reprogramming, regulation of stem cell self-renewal and differentiation, the stem cell niche, and signaling and gene regulation in stem cells. Studies of embryonic stem cells and adult stem cells are covered, along with research shedding light on the roles of these cells in regeneration and cancer.
