

Handcuffed to your pipette?

Free yourself!

The Apollo 324™ system automates library preparation for all major NGS systems, so you can spend your time on more important things. Setting up and starting a run takes only 15 minutes of hands-on time.

Then you are free.

Our PrepX™ reagent kits generate consistent, quality libraries for Ion Torrent PGM™, Roche 454™ GS FLX Titanium™, FLX+ and GS Junior™, and all Illumina® platforms. Color-coded reagent kits – for DNA, RNA and CHIP-seq applications – minimize errors and simplify instrument setup. Pre-aliquoted strips let you set up full or partial runs with no reagent waste.

GENETIC RESEARCHERS WANT TO

KNOW

MORE ABOUT ME THROUGH WHOLE
TRANSCRIPTOME ANALYSIS. I AM READY TO
HELP IDENTIFY IMPORTANT BIOMARKERS.
THAT'S WHY I'M ON THE WAY TO
EXPRESSION ANALYSIS.

EVERY SPECIMEN HAS A STORY. LET YOURS BE HEARD AT GENOMICKNOWHOW.COM

A Quintiles Company

The future has arrived

Let your next discovery begin
with the Ion Proton™ Sequencer

The Ion Proton™ Sequencer removes the high cost and complexity of today's genome-scale sequencing and brings it to your lab, on your budget, and on your schedule.

Get rapid, genome-scale benchtop sequencing at
lifetechnologies.com/proton

Ribosome FootPrinting

Evolution of NGS Applications

ARTSeq™ (Active mRNA Translation) provides a 'snapshot' of the ribosomes active in a cell at a specific time point by deep sequencing the ribosome-protected mRNA fragments. This powerful method can be used to:

- Investigate translational control
- Measure gene expression
- Determine rate of protein synthesis, and
- Predict protein abundance

Follow the steps

Your DNA lab will move
faster
if it can see where it's going.

Fragment Analyzer™ replaces lab-on-a-chip for RNA, gDNA, Next Gen Sequencing and SSR Genotyping applications.

- ◆ Assess up to 40,000 bp
- ◆ 12 or 96 sample format

Fragment Analyzer™ customers since its January, 2012 introduction:

- ◆ 20 government institutes and labs in Germany, Austria, Switzerland, Italy, France, the United Kingdom, Japan, China, Brazil, Canada and the U.S.
- ◆ 18 leading plant science universities
- ◆ 13 medical genetic/genomics testing firms
- ◆ 7 U.S. medical schools
- ◆ 6 of the 10 biggest seed companies in the world

“We found speed, quality, resolution and versatility in the Fragment Analyzer.”

— Dr. Sunil Chandran, Senior Scientist, Amyris, Inc.

MARCH 2-5, 2013 • PALM SPRINGS, CALIFORNIA

ABRF2013

TOOLS FOR THE ADVANCEMENT OF CONVERGENCE SCIENCE

Join us in Palm Springs for a new conference format including

- **Light Microscopy:** highlighting super-resolution, image processing and fluorescent probes
- **Genomics:** hot topics to include next-generation sequencing, clinical genomics and tools and resources for analyzing genomic datasets
- **Proteomics:** cutting-edge sessions discussing epigenetic mechanisms, molecular interactomics, biomarkers and large data sets
- **Core Facility Administration, Management and Operations:** strategies, solutions and current issues

ABRF 2013 will explore and embrace a new trend that combines expertise from a number of disciplines focused on solving problems in biomedical research. At the meeting, Core Facility Directors, Staff Scientists, Researchers, Administrators and Industry Partners will convene to present their latest research technologies and products that form the base of Convergence Science.

Register by
January 10th and
Save \$50

The Association of Biomolecular Resource Facilities

is an international society dedicated to advancing core and research biotechnology laboratories through research, communication, and education.

WNT SIGNALING

Edited by Roel Nusse, *Stanford University Medical Center*, Xi He, *Children's Hospital Boston*, and Renée van Amerongen, *Stanford University Medical Center*

Wnt proteins are signaling molecules that play critical roles during embryonic development and in the regeneration of adult tissues. They bind to Frizzled and LRP family receptors on the cell surface, triggering a series of events that cause β -catenin to enter the nucleus and activate transcription factors that control cell fate and cell proliferation. Mutations in components of the Wnt pathway lead to developmental defects and are common in cancer.

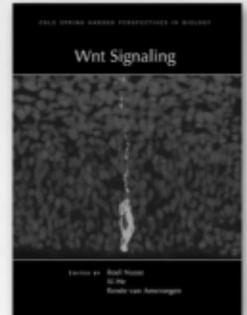

Written and edited by experts in the field, this collection from *Cold Spring Harbor Perspectives in Biology* covers all aspects of canonical Wnt signaling, as well as β -catenin-independent Wnt signaling and cross-talk with other pathways. The contributors examine the numerous Wnt ligands; their production, secretion, and interactions with components of the extracellular environment; and details of the downstream signaling pathways that mediate the effects of Wnt proteins on cells. The roles of Wnt signaling in stem cell self-renewal, cell polarity, body-axis specification, wound healing, and other aspects of normal development and physiology are also covered.

This volume includes discussion of Wnt signaling in cancer, skeletal defects, neurological disorders, and other human disease states. Thus, it is an indispensable reference for cell and developmental biologists as well as those, especially in the fields of stem cell biology and regenerative medicine, who are interested in targeting the Wnt pathway for therapeutic purposes.

Contents

Preface

Three Decades of Wnts: A Personal Perspective on How a Scientific Field Developed
Roel Nusse and Harold Varmus

SECTION I: SIGNALING MECHANISMS

Wnt Proteins

Karl Willert and Roel Nusse

Secreted and Transmembrane Wnt Inhibitors and Activators

Cristina-Maria Cruciata and Christof Niehrs

Frizzled and LRP5/6 Receptors for Wnt/ β -Catenin Signaling

Bryan T. MacDonald and Xi He

The β -Catenin Destruction Complex

Jennifer L. Stamos and William I. Weiss

TCF/LEFs and Wnt Signaling in the Nucleus

Ken M. Cadigan and Marian L. Waterman

Alternative Wnt Pathways and Receptors

Renée van Amerongen

SECTION II: DEVELOPMENT

The Evolution of the Wnt Pathway

Thomas W. Holstein

Wnt/Wingless Signaling in *Drosophila*

Sharan Swarup and Esther M. Verheyen

β -Catenin-Dependent Wnt Signaling in *C. elegans*: Teaching an Old Dog a New Trick

Belinda M. Jackson and David M. Eisenmann

Wnt Signaling in Vertebrate Axis Specification

Hiroki Hikasa and Sergei Y. Sokol

Wnt Signaling in Mammalian Development:

Lessons from Mouse Genetics

Jianbo Wang, Tanvi Sinha, and

Anthony Wynshaw-Boris

SECTION III: STEM CELL BIOLOGY AND DIFFERENTIATION

Wnt Pathway Regulation of Embryonic Stem

Cell Self-Renewal

Bradley J. Merrill

Wnt Signaling, Stem Cells, and Cancer of the

Gastrointestinal Tract

Arnout Schepers and Hans Clevers

Wnt Signaling in Bone Development and Disease:

Making Stronger Bone with Wnts

Jean B. Regard, Zhendong Zhong, Bart O. Williams,

and Yingzi Yang

Wnt Signaling in the Vertebrate Central Nervous

System: From Axon Guidance to Synaptic Function

Patricia C. Salinas

Wnt Signaling and Forebrain Development

Susan J. Harrison-Uy and Samuel J. Pleasure

Wnt Signaling in Normal and Malignant

Hematopoiesis

William Lento, Kendra Congdon, Carljin Voermans,

Marcie Kritzik, and Tannishtha Reya

Wnt Signaling in Skin Development, Homeostasis,

and Disease

Xinhong Lim and Roel Nusse

Wnt Signaling in Mammary Glands: Plastic Cell

Fates and Combinatorial Signaling

Caroline M. Alexander, Shrutti Goel,

Saja A. Fakhraldien, and Soyoung Kim

Wnt Signaling in Neuromuscular Junction

Development

Kate Koles and Vivian Budnik

SECTION IV: DISEASE AND INTERVENTION

Wnt Signaling in Cancer

Paul Polakis

Wnt Signaling and Injury Repair

Jemima L. Whyte, Andrew A. Smith, and Jill A. Helms

Targeting Wnt Pathways in Disease

Zachary F. Zimmerman, Randall T. Moon, and

Andy J. Chien

Addiction

COLD SPRING HARBOR PERSPECTIVES IN MEDICINE

Addiction

Edited by R. Christopher Pierce, *University of Pennsylvania* and Paul J. Kenny, *The Scripps Research Institute*

Drug and alcohol abuse elicits significant biological changes in the brain that drive compulsive behavior and lead to addiction. Abrupt cessation leads to withdrawal, craving, and relapse. A complete understanding of the brain changes produced by abused substances is therefore necessary if we are to develop treatments for drug dependence.

Written and edited by experts in the field, this collection from *Cold Spring Harbor Perspectives in Medicine* explores the biological basis of addiction to alcohol, nicotine, and other psychoactive drugs. Contributors describe the molecular targets of these drugs, the resulting changes to neural networks, and the various genetic, developmental, and behavioral factors that influence the progression from abuse to addiction. Animal models of addictive behavior and techniques to dissect neural circuits are also described.

This volume includes discussion of compounds currently used or under development to treat drug dependence. Thus, it is an indispensable reference for neuroscientists and all who are interested in reducing the public health burden of substance abuse.

CONTENTS

Preface

INTRODUCTION

Rational Development of Addiction

Pharmacotherapies: Successes, Failures, and Prospects

R. Christopher Pierce, Charles P. O'Brien, Paul J. Kenny, and Louk J.M.J. Vanderschuren

SECTION 1: METHODS AND MODELS

Animal Studies of Addictive Behavior

Louk J.M.J. Vanderschuren and Serge H. Ahmed

Responses to Novelty and Vulnerability to Cocaine Addiction: Contribution of a Multi-Symptomatic Animal Model

David Belin and Véronique Deroche-Gamonet

Systems Level Neuroplasticity in Drug Addiction

Matthew W. Felsenstein and Ronald E. See

Optogenetic Strategies to Dissect the Neural Circuits that Underlie Reward and Addiction

Alice M. Stamatakis and Garret D. Stuber

SECTION 2: PSYCHOSTIMULANTS

Mechanisms of Psychostimulant-Induced Structural Plasticity

Sam A. Golden and Scott J. Russo

Roles of Nucleus Accumbens CREB and Dynorphin in Dysregulation of Motivation

John W. Muschamp and William A. Carlezon, Jr.

Cocaine-Evoked Synaptic Plasticity of Excitatory Transmission in the Ventral Tegmental Area

Christian Lüscher

Psychostimulant-Induced Neuroadaptations in Nucleus Accumbens AMPA Receptor Transmission

R. Christopher Pierce and Marina E. Wolf

Epigenetics and Psychostimulant Addiction

Heath D. Schmidt, Jacqueline F. McGinry, Anne E. West, and Ghazaleh Sadri-Vakili

SECTION 3: OPIATES

Opiate-Induced Molecular and Cellular Plasticity of Ventral Tegmental Area and Locus Coeruleus Catecholamine Neurons

Michelle S. Mazei-Robison and Eric J. Nestler

Glutamate Mechanisms Underlying Opiate Memories

Jamie Peters and Taco J. De Vries

The Neurobiology of Opiate Motivation

Ryan Ting-A-Kee and Derek van der Kooy

Medications Development for Opioid Abuse

S. Stevens Negus and Matthew L. Banks

SECTION 4: NICOTINE

Molecular Mechanisms Underlying Behaviors Related to Nicotine Addiction

Marina R. Picciotto and Paul J. Kenny

Short- and Long-Term Consequences of Nicotine Exposure during Adolescence for Prefrontal Cortex Neuronal Network Function

Natalia A. Goriounova and

Huibert D. Mansvelder

Mesolimbic Dopamine and Habenulo-Interpeduncular Pathways in

Nicotine Withdrawal

John A. Dani and Mariella De Biasi

The "Stop" and "Go" of Nicotine Dependence: Role of GABA and Glutamate

Manoranjan S. D'Souza and Athina Markou

Translational Research in Nicotine Dependence

Jill R. Turner, Allison Gold, Robert Schmall, and Julie A. Blendy

SECTION 5: ALCOHOL

Ethanol Effects on N-Methyl-D-Aspartate Receptors in the Bed Nucleus of the Stria Terminalis

Tiffany A. Wills and Danny G. Winder

The Central Amygdala and Alcohol: Role of γ -Aminobutyric Acid, Glutamate, and Neuropeptides

Marisa Roberto, Nicholas W. Gilpin, and

George R. Siggins

Opioid Pharmacogenetics of Alcohol Addiction

Wade Berrettini

SECTION 6: CANNABINOIDS

A Brain on Cannabinoids: The Role of Dopamine Release in Reward Seeking

Erik B. Oleson and Joseph F. Cheer

Synaptic Targets of $\Delta 9$ -Tetrahydrocannabinol in the Central Nervous System

Alexander F. Hoffman and Carl R. Lupica

BASIC STEREOLOGY

FOR BIOLOGISTS AND NEUROSCIENTISTS

By Mark J. West, *University of Aarhus, Denmark*

Stereological techniques allow biologists to create quantitative, three-dimensional descriptions of biological structures from two-dimensional images of tissue viewed under the microscope. For example, they can accurately estimate the size of a particular organelle, the total length of a mass of capillaries, or the number of neurons or synapses in a particular region of the brain.

This book provides a practical guide to designing and critically evaluating stereological studies of the nervous system and other tissues. It explains the basic concepts behind design-based stereology and how to get started. Also included are detailed descriptions of how to prepare tissue appropriately, perform pilot studies and decide on the appropriate sampling strategy, and account for phenomena such as tissue shrinkage. Numerous examples of applications of stereological methods that are applicable to studies of the central system and a wide variety of other tissues are explained. The book is therefore essential reading for neurobiologists and cell biologists interested in generating accurate representations of cell and tissue architecture.

2012, 206 pp., illus., index
Hardcover \$69

ISBN 978-1-936113-60-6

CONTENTS

- Preface
- 1. Introduction to Stereology
- 2. Estimating Volume
- 3. Estimating Object Number
- 4. Isotropy, iSectors, and Vertical Sections
- 5. Estimating Length
- 6. Estimating Surface Area
- 7. The Precision of an Estimate
- 8. Systematic versus Random Sampling
- 9. Getting Started
- 10. Optimizing the Sampling Scheme:
Amount of Individuals, Sections, and Probes
- 11. Shrinkage
- 12. Local Estimators of Size
- 13. Counting and Measuring
Ultrastructural Features
- 14. What to Report: Information to Be Included
in Publication
