Echo® Acoustic LIQUID HANDLING
for SEQUENCING

Miniaturize Nextera Library Prep Reactions
with Echo® Acoustic Liquid Handling

Reduce Sequencing Costs

Echo® Liquid Handlers use acoustic energy to transfer nanoliter volumes of reagents, allowing the reduction of NGS library preparation reaction volumes. Dramatically reduce reagent costs, save samples, and eliminate steps – all while improving quality and throughput.

- ▶ **Miniaturize reactions at least 20-fold and significantly reduce cost per sample without sacrificing data quality**
- ▶ **Streamline assay cleanup and sequence more samples in less time for higher throughput and productivity**

Superb sensitivity. No thermocycler.

Researchers from the Natural Resources Institute, UK, developed an RPA-based assay that can detect **as little as 14pg/µl of purified RNA** from a plant infected with *Yam mosaic virus*; comparable to the gold standard RT-PCR method, but without the need of a thermocycler.

Long story short: Bionano reveals more.

Long- and short-read NGS data identifies smaller DNA mutations, but lacks critical information around genome structure.

Bionano genome mapping fills in what's missing from sequencing-based data providing unmatched structural variation discovery and analysis for structural variations ranging from 1,000 bp to megabase pairs in length.

99% sensitivity for large homozygous insertions and deletions*

87% sensitivity for large heterozygous insertions and deletions*

98% sensitivity for translocations*
