

Editorial

Scope note x

A statement about the publication describing genome sequencing of the Atacama skeleton xiv

Commentary

The Atacama skeleton 607^{OA}
Garry Nolan and Atul Butte

Perspective

Recognition of the polycistronic nature of human genes is critical to understanding the genotype-phenotype relationship 609^{OA}
Marie A. Brunet, Sébastien A. Levesque, Darel J. Hunting, Alan A. Cohen, and Xavier Roucou

Research

Enduring epigenetic landmarks define the cancer microenvironment 625^{OA}
Ruth Pidsley, Mitchell G. Lawrence, Elena Zotenko, Birunthi Niranjana, Aaron Statham, Jenny Song, Roman M. Chabanon, Wenjia Qu, Hong Wang, Michelle Richards, Shalima S. Nair, Nicola J. Armstrong, Hieu T. Nim, Melissa Papargiris, Preetika Balanathan, Hugh French, Timothy Peters, Sam Norden, Andrew Ryan, John Pedersen, James Kench, Roger J. Daly, Lisa G. Horvath, Phillip Stricker, Mark Frydenberg, Renea A. Taylor, Clare Stirzaker, Gail P. Risbridger, and Susan J. Clark

LI retrotransposition is a common feature of mammalian hepatocarcinogenesis 639^{OA}
Stephanie N. Schauer, Patricia E. Carreira, Ruchi Shukla, Daniel J. Gerhardt, Patricia Gerdes, Francisco J. Sanchez-Luque, Paola Nicoli, Michaela Kindlova, Serena Ghisletti, Alexandre Dos Santos, Delphine Rapoud, Didier Samuel, Jamila Faivre, Adam D. Ewing, Sandra R. Richardson, and Geoffrey J. Faulkner

In-depth characterization of the cisplatin mutational signature in human cell lines and in esophageal and liver tumors 654
Arnoud Boot, Mi Ni Huang, Alvin W.T. Ng, Szu-Chi Ho, Jing Quan Lim, Yoshiiku Kawakami, Kazuaki Chayama, Bin Tean Teh, Hidewaki Nakagawa, and Steven G. Rozen

Mutational signatures of DNA mismatch repair deficiency in *C. elegans* and human cancers 666^{OA}
Bettina Meier, Nadezda V. Volkova, Ye Hong, Pieta Schofield, Peter J. Campbell, Moritz Gerstung, and Anton Gartner

Integrated analysis sheds light on evolutionary trajectories of young transcription start sites in the human genome 676^{OA}
Cai Li, Boris Lenhard, and Nicholas M. Luscombe

HNRNPA1 promotes recognition of splice site decoys by U2AF2 in vivo 689
Jonathan M. Howard, Hai Lin, Andrew J. Wallace, Garam Kim, Jolene M. Draper, Maximilian Haeussler, Sol Katzman, Masoud Toloue, Yunlong Liu, and Jeremy R. Sanford

(continued)

In vitro iCLIP-based modeling uncovers how the splicing factor U2AF2 relies on regulation by cofactors 699
F.X. Reymond Sutandy, Stefanie Ebersberger, Lu Huang, Anke Busch, Maximilian Bach, Hyun-Seo Kang, Jörg Fallmann, Daniel Maticzka, Rolf Backofen, Peter F. Stadler, Kathi Zarnack, Michael Sattler, Stefan Legewie, and Julian König

Methods

Double insertion of transposable elements provides a substrate for the evolution of satellite DNA 714
Michael P. McGurk and Daniel A. Barbash

Optical mapping reveals a higher level of genomic architecture of chained fusions in cancer 726^{OA}
Eva K.F. Chan, Daniel L. Cameron, Desiree C. Petersen, Ruth J. Lyons, Benedetta F. Baldi, Anthony T. Papenfuss, David M. Thomas, and Vanessa M. Hayes

Sequential regulatory activity prediction across chromosomes with convolutional neural networks 739^{OA}
David R. Kelley, Yakir A. Reshef, Maxwell Bileschi, David Belanger, Cory Y. McLean, and Jasper Snoek

taxMaps: comprehensive and highly accurate taxonomic classification of short-read data in reasonable time 751
André Corvelo, Wayne E. Clarke, Nicolas Robine, and Michael C. Zody

Resource

Hackathons as a means of accelerating scientific discoveries and knowledge transfer 759^{OA}
Amel Ghouila, Geoffrey Henry Siwo, Jean-Baka Domelevo Entfellner, Sumir Panji, Katrina A. Button-Simons, Sage Zenon Davis, Faisal M. Fadlelmola, The DREAM of Malaria Hackathon Participants, Michael T. Ferdig, and Nicola Mulder

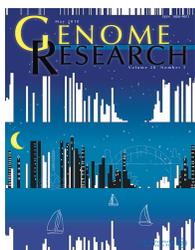

Corrigenda

Corrigendum: Detecting differential copy number variation between groups of samples 766
Craig B. Lowe, Nicelio Sanchez-Luege, Timothy R. Howes, Shannon D. Brady, Rhea R. Daugherty, Felicity C. Jones, Michael A. Bell, and David M. Kingsley

Corrigendum: Evolutionary expansion of DNA hypomethylation in the mammalian germline genome 766
Jiangnan Qu, Emily Hodges, Antoine Molaro, Pascal Gagneux, Matthew D. Dean, Gregory J. Hannon, and Andrew D. Smith

Corrigendum: A systematic comparison reveals substantial differences in chromosomal versus episomal encoding of enhancer activity 766
Fumitaka Inoue, Martin Kircher, Beth Martin, Gregory M. Cooper, Daniela M. Witten, Michael T. McManus, Nadav Ahituv, and Jay Shendure

^{OA}Open Access paper

Cover Just like people in big cities, who rely on a complex network of infrastructure for their daily lives, cancer cells depend on the surrounding tumor microenvironment. In this issue, new landmarks are identified in the epigenome landscape of the tumor microenvironment, distinguishing between normal and tumor tissue. These peaks and troughs in DNA methylation are reimagined as a cityscape featuring landmarks from Sydney and Melbourne, Australia, where the collaborative research was performed. (Cover illustration by Dr. Madhavi P. Maddugoda, Garvan Institute, Sydney, Australia. [For details, see Pidsley et al., pp. 625–638.]
