

Research

- Loss of epigenetic suppression of retrotransposons with oncogenic potential in aging mammary luminal epithelial cells** 1229^{OA}
Parijat Senapati, Masaru Miyano, Rosalyn W. Sayaman, Mudaser Basam, Amy Leung, Mark A. LaBarge, and Dustin E. Schones
- Cytosolic and mitochondrial translation elongation are coordinated through the molecular chaperone TRAP1 for the synthesis and import of mitochondrial proteins** 1242^{OA}
Rosario Avolio, Ilenia Agliarulo, Daniela Criscuolo, Daniela Sarnataro, Margherita Auriemma, Sabrina De Lella, Sara Pennacchio, Giovanni Calice, Martin Y. Ng, Carlotta Giorgi, Paolo Pinton, Barry S. Cooperman, Matteo Landriscina, Franca Esposito, and Danilo Swann Matassa
- Chromatin loop dynamics during cellular differentiation are associated with changes to both anchor and internal regulatory features** 1258
Marielle L. Bond, Eric S. Davis, Ivana Y. Quiroga, Anubha Dey, Manjari Kiran, Michael I. Love, Hyejung Won, and Douglas H. Phanstiel
- Ultra-long-range interactions between active regulatory elements** 1269^{OA}
Elias T. Friman, Ilya M. Flyamer, Davide Marenduzzo, Shelagh Boyle, and Wendy A. Bickmore
- A Chinese indicine pangenome reveals a wealth of novel structural variants introgressed from other *Bos* species** 1284^{OA}
Xuelei Dai, Peipei Bian, Dexiang Hu, Funong Luo, Yongzhen Huang, Shaohua Jiao, Xihong Wang, Mian Gong, Ran Li, Yudong Cai, Jiayue Wen, Qimeng Yang, Weidong Deng, Hojjat Asadollahpour Nanaei, Yu Wang, Fei Wang, Zijing Zhang, Benjamin D. Rosen, Rasmus Heller, and Yu Jiang
- Historical RNA expression profiles from the extinct Tasmanian tiger** 1299^{OA}
Emilio Mármol-Sánchez, Bastian Fromm, Nikolay Oskolkov, Zoé Pochon, Panagiotis Kalogeropoulos, Eli Eriksson, Inna Biryukova, Vaishnovi Sekar, Erik Ersmark, Björn Andersson, Love Dalén, and Marc R. Friedländer
- Extensive variation in germline de novo mutations in *Poecilia reticulata*** 1317
Yuying Lin, Iulia Darolti, Wouter van der Bijl, Jake Morris, and Judith E. Mank
- Transposable elements drive the evolution of metazoan zinc finger genes** 1325^{OA}
Jonathan N. Wells, Ni-Chen Chang, John McCormick, Caitlyn Coleman, Nathalie Ramos, Bozhou Jin, and Cédric Feschotte

(continued)

Copy number variation alters local and global mutational tolerance 1340^{OA}
Grace Avecilla, Pieter Spealman, Julia Matthews, Elodie Caudal, Joseph Schacherer,
and David Gresham

Methods

Diffusion-enhanced characterization of 3D chromatin structure reveals its linkage
to gene regulatory networks and the interactome 1354
Yueying He, Yue Xue, Jingyao Wang, Yupeng Huang, Lu Liu, Yanyi Huang, and Yi Qin Gao

Allele-specific RNA N⁶-methyladenosine modifications reveal functional genetic variants
in human tissues 1369
Shuo Cao, Haoran Zhu, Jinru Cui, Sun Liu, Yuhe Li, Junfang Shi, Junyuan Mo, Zihan Wang,
Hailan Wang, Jiaxin Hu, Lizhi Chen, Yuan Li, Laixin Xia, and Shan Xiao

A transcriptome-based single-cell biological age model and resource for tissue-specific
aging measures 1381^{OA}
Shulin Mao, Jiayu Su, Longteng Wang, Xiaochen Bo, Cheng Li, and Hebing Chen

Unraveling the palindromic and nonpalindromic motifs of retroviral integration site sequences
by statistical mixture models 1395^{OA}
Dalibor Miklík, Jiří Grim, Daniel Elleder, and Jiří Hejnar

Resources

Genetic features and genomic targets of human KRAB-zinc finger proteins 1409^{OA}
Jonas de Tribolet-Hardy, Christian W. Thorball, Romain Forey, Evarist Planet, Julien Duc,
Alexandre Coudray, Bara Khubieh, Sandra Offner, Cyril Pulver, Jacques Fellay, Michael Imbeault,
Priscilla Turelli, and Didier Trono

Spatial transcriptomics reveals asymmetric cellular responses to injury in the regenerating spiny
mouse (*Acomys*) ear 1424^{OA}
Henriette van Beijnum, Tim Koopmans, Antonio Tomasso, Vanessa Disela, Severin te Lindert,
Jeroen Bakkers, Anna Alemany, Eugene Berezikov, and Kerstin Bartscherer

^{OA}Open Access paper

Cover The common guppy, *Poecilia reticulata*, can adapt rapidly to different ecological environments, and shows stunning diversity in color, life history, and physiology. In this issue, the guppy shows remarkable variation in de novo mutation rate. (Cover illustration by Jacelyn Shu, jacelyndesigns@gmail.com, <https://www.jacelyndesigns.com/>. [For details, see Lin et al., pp. 1317–1324.]
