

## Spin your way to clean DNA with QIAquick

Take QIAquick Kits for a spin and see how easy it is to clean up DNA fragments. QIAquick microspin membrane technology means:

- 99% contaminant removal
- up to 90% recovery of DNA
- fast 5 – 15 minute procedures
- optimized buffers for each application

Say good-bye to time-consuming phenol extraction, gel filtration, ethanol precipitation and electroelution — with QIAquick microspin technology you simply load the sample, wash, and elute. The whole procedure takes 5 to 15 minutes from start to finish. Purified DNA is recovered with up to 90% efficiency, ready for use in all standard applications, such as restriction, ligation, transformation, hybridization, PCR, and sequencing.

QIAquick is available in 3 specialized kits. Each kit has different buffers, designed to provide optimum purification in each specific application:

Agarose gel analysis of radioactive labeling reactions before (b) and after (a) purification using QIAquick Nucleotide Removal Kit.

**QIAquick Gel Extraction Kits** extract DNA fragments between 100 bp and 10 kb from TAE and TBE agarose gels.

**QIAquick PCR Purification Kits** separate primers (up to 40 bases), nucleotides, mineral oil, and other reagents from ds and ss PCR products as small as 100 bp.

**QIAquick Nucleotide Removal Kits** clean up DNA fragments and oligos as small as 20 bases after labeling, sequencing and other enzymatic reactions.

To find out more about the range of QIAquick Kits, contact QIAGEN or your local distributor — and spin your way to clean DNA.
