

Tufarelli_BTR homology plot enlargement

Enlargement of the dot plot region between co-ordinates 140738 and 140788 of mouse chromosome 11 against co-ordinates 10350 and 11600 of mouse chromosome 17. This shows that at higher resolution the two dark rectangles in Figure 3B are composed of a short diagonal for each 30-mer repeat unit constituting the BTRs.
