

## Supplemental Figure

**Figure 1S.** The retrotransposition activity of *A/u* elements with different heterogeneous A-tails driven by a wild-type L1 (JM101/L1.3 no tag (Wei et al 2000)) was evaluated. Columns represent the mean G418 resistant colony normalized relative to the *A/u* with 30 homogenous As (arbitrarily designated as 100%) with the standard deviation shown as error bars. \* indicates a significant difference  $p < 0.05$  (Student paired t-TEST) relative to the control (A<sub>30</sub>),  $n=3$ .
