

ncRNA (63)

Promoters (374)

Terminators (47)

TF binding sites (75)

K-means clustering of ICEs and ORFs in *E. coli* based on phylogenetic profiles. The clustering is the same as in Fig 2 and the four panels illustrate cluster enrichment or depletion in known ncRNAs, promoters, transcription terminators and transcription factor binding sites, respectively. Color codes and numbers are the same as in Fig. 2.
