

Table S4. Putative numbers of target genes and binding sites (enhancers).

	Genes	BSs	Non-overlapping BSs
Human (zebrafish)	327 (356)	874 (903)	654 (813)
Mouse (zebrafish)	272 (269)	1032 (746)	819 (640)

For each cross-species comparison (human-zebrafish or mouse-zebrafish) the numbers represent mammalian targets with zebrafish targets in parentheses.
