

Figure S3

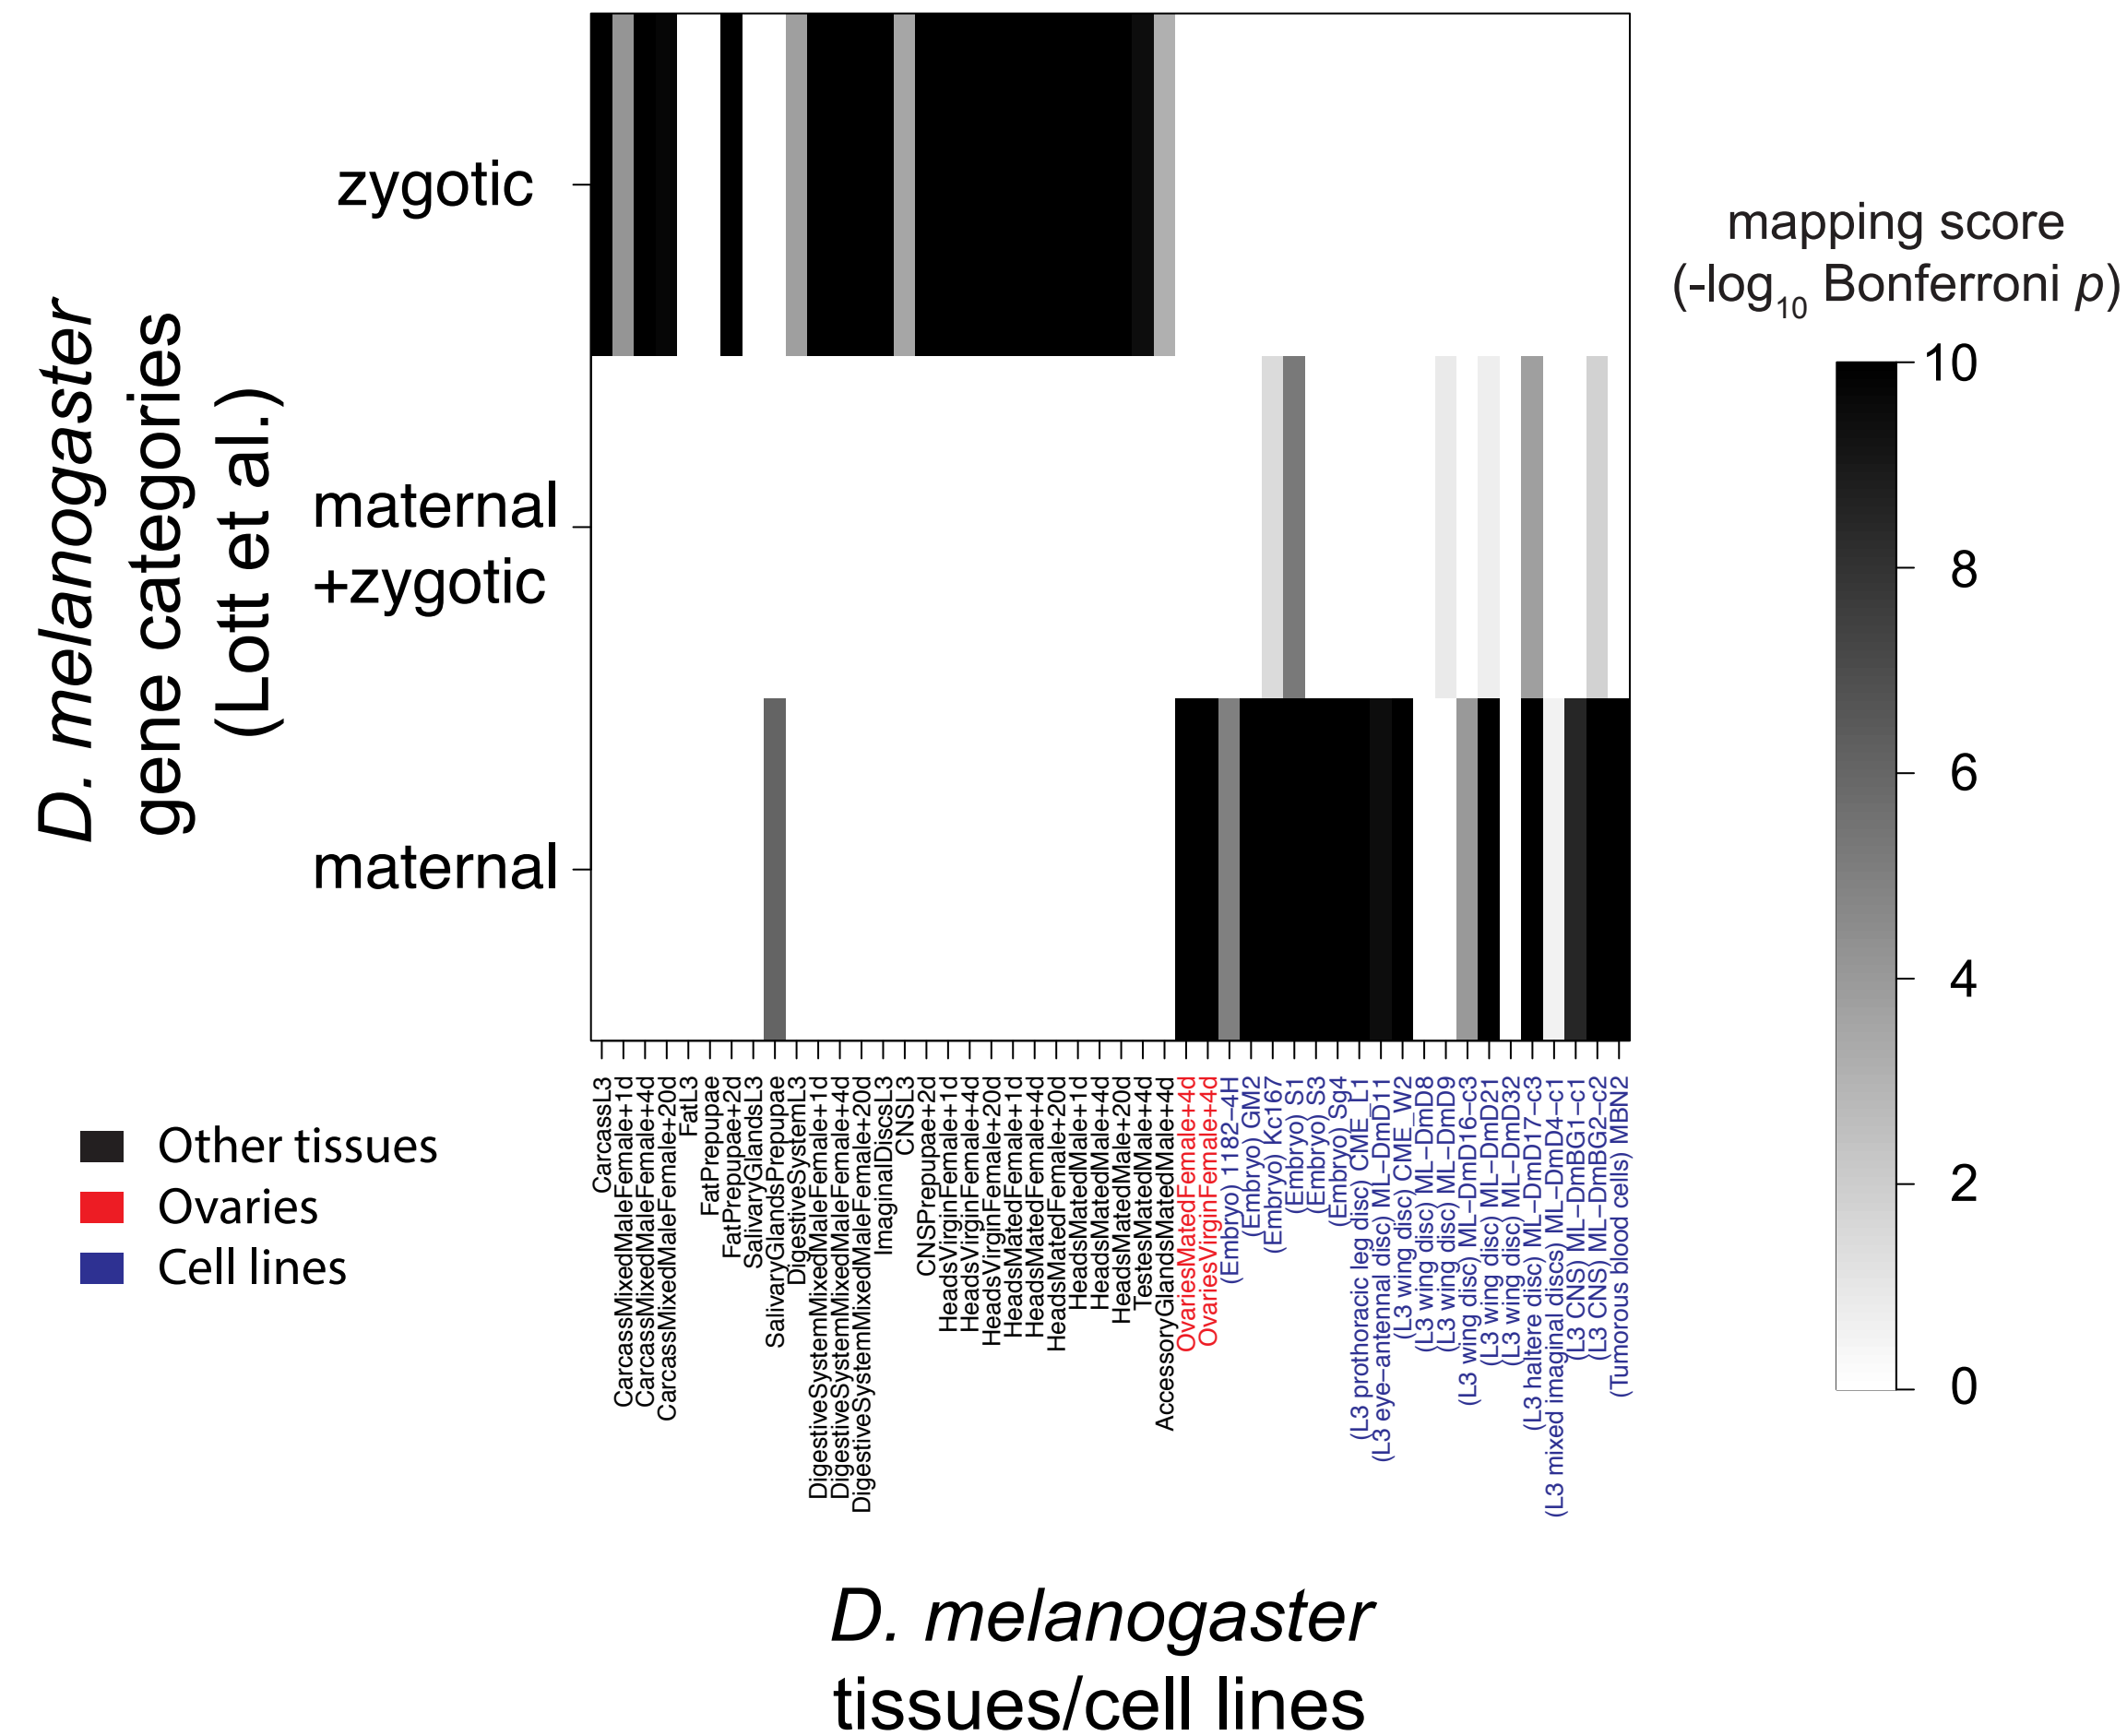

Figure S3. Comparison of *D. melanogaster* tissues and cell lines with the three gene categories (maternal, maternal/zygotic, and zygotic) defined in (Lott et al. 2011). More significant mapping scores are shown as darker color, corresponding to the scale showing $-\log_{10}$ transformed Bonferroni corrected p -values, which are calculated from the hypergeometric test in Figure 2A. Hierarchical clustering was applied to order the tissues and cell lines.
