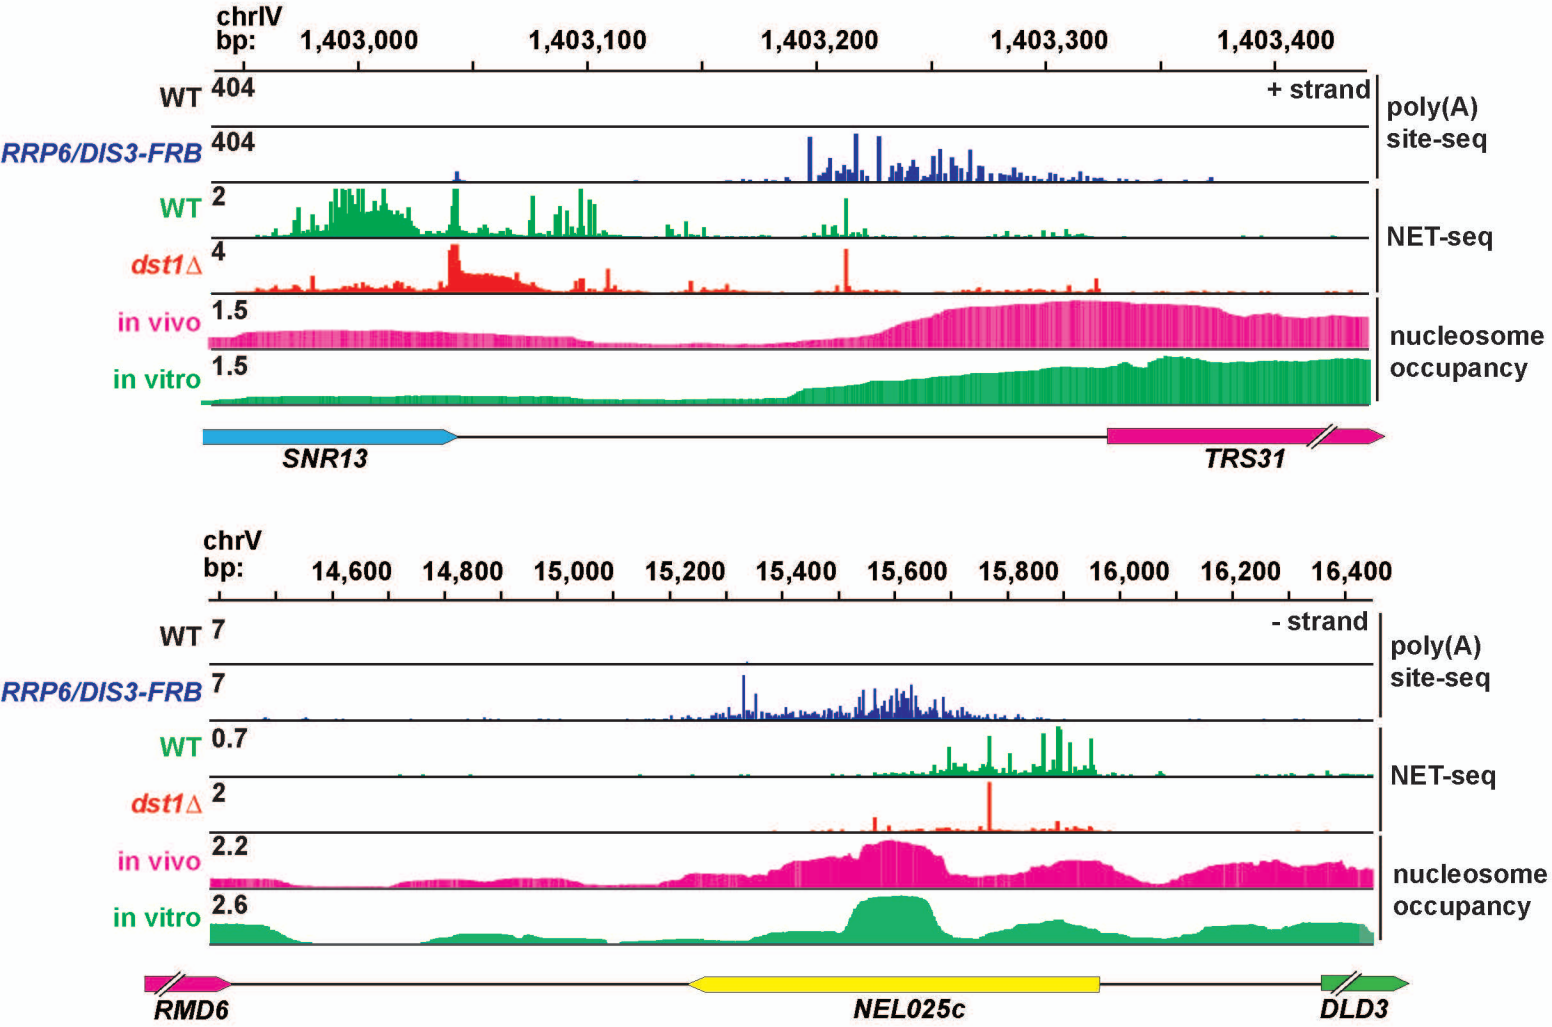
Roy_et_al_Supplemental_Fig.S5



Supplemental Figure S5. Correlation between non-roadblocked NNS termination sites and nucleosome occupancy, Related to Figures 2 and 3

(A) Genome browser views are show for regions encompassing the model NNS targets *SNR13* (+ strand, top panel) and *NEL025c* (- strand, bottom panel). PATs in WT and the *RRP6/ DIS3-FRB* strain, nascent 3´ ends in WT and *dst1Δ*, and *in vivo* and *in vitro* nucleosome occupancies are shown (Churchman and Weissman 2011; Kaplan et al. 2009).
