

Supplemental Figure S5: (related to Figure 5). Shared interactions between C2H2-ZF proteins.
 The histograms display the distribution of number of C2H2-ZF proteins that purified with each prey at a given confidence score cutoff to define the interaction (including/excluding cytoplasmic preys). The results presented in Figure 5 correspond to the plot with nuclear preys and $\text{AvgP} \geq 0.9$ (middle right). Blue columns indicate the total number of preys that interact with only one or two of the 118 C2H2-ZFPs examined by AP-MS.
