Supplemental Figure 6. 5hmC fold enrichment on c-DMRs and t-DMRs. (A) 5hmC fold enrichment of liver c-DMRs (B) and lung c-DMRs. (C) 5hmC fold enrichment of t-DMRs in liver and lung. Y-axis were log scaled. 5hmC enrichment fold in each categories was calculated as the ratio of 5hmC density of that feature to genome-wide average 5hmC density.
