

***Drosophila* poised enhancers are generated during tissue patterning with the help of repression**

Supplemental Figure S1. Analysis of the transcript levels of DV-regulated target genes across tissues

Boxplots of the fold change in transcript levels between Tl^{10b} embryos and gd^7 embryos (\log_2 FPKM) of confirmed target genes of known DV enhancers (Supplemental Material). Whiskers show 1.5 times the interquartile range. Significance determined using the Wilcoxon rank sum test.
