

G.magnirostris_G vs. *L.noctis*

C.pauper_F vs. *L.noctis*

P.inornata_C vs. *L.noctis*

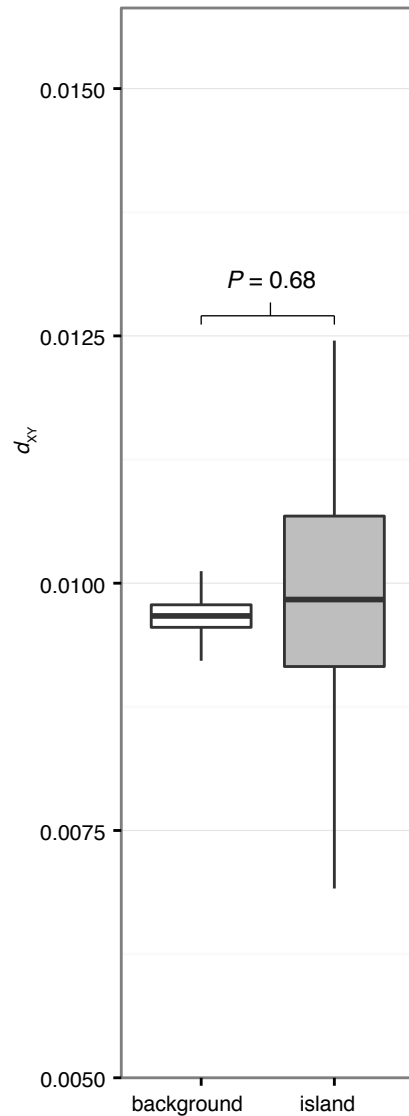

Figure S3. Estimate of absolute divergence (d_{xy}) between three Darwin's finches and the outgroup species *L. noctis* from Barbados. Grey boxes represent values in regions corresponding to genomic islands in Darwin's finches and white boxes represent genomic background from outgroup comparisons. Significance is tested with randomization test.
