

Supplemental_Figure_S6. Heat map of Spearman's rank correlation coefficients of the 4C-seq profiles in *cis* of mHOR.

4C-seq data of mouse orthologous region (mHOR) from mouse fibroblasts carrying circular HAC (mHOR-C) and linear HAC (mHOR-L). The corresponding 4C-seq profiles are shown in Fig. 2B. 4C-seq data within 200 kb from each viewpoint were excluded. The colors range from anti-correlating (-0.7) blue to correlating red (0.7).
