

**Supp Fig S6: Similarity of CMINT modules inferred from 1 million 2000 bp genomic regions in the hematopoietic lineage.** Plot of similarity (F-score) of module membership of regions between each pair of cell types over the entire genome. Two different scales are used, Red: similarity for diagonal modules; Blue: similarity for off-diagonal modules. The more red or blue an entry, the more similar are the modules. An example pairwise comparison is highlighted for the MF and GMP cell types.
