

Supp Fig S9: Significance of similarity of CMINT modules inferred from ~28,000 2000 bp genomic regions in the hematopoietic lineage. Shown are the significance of similarity of pairs of modules for pairs of cell types in the hematopoiesis lineage. Similar to **Supp Fig S7**. Two different scales are used, Red: similarity for diagonal modules; Blue: similarity for off-diagonal modules. The more red or blue an entry, the more significant is the similarity of modules.

Supp Fig S9
