

# Supplemental Figure 3

**Node color:** ● Cell death and survival ● Protein synthesis ● Lipid metabolism ● Molecular transport  
● Post-translational modification ● Cell cycle ● Nucleic acid metabolism

**Node with gray outline:** OMIMs

**Edge color:** — Predicted genetic interaction; — Protein-protein interaction  
— Predicted and validated genetic interaction

**Supplemental Figure 3. Subnetwork of human-yeast genetic interactions with a focus on OPTN and ANG.** A subnetwork was constructed with OPTN/ANG and their toxicity modifiers with less than five interaction paths.
