Supplemental Figure S22 – Structural analysis of AS events in VastDB

A) Examples of two proteins structures with alternative (A, red) and neighboring (C1 [orange] and C2 [beige]) exons mapped: HsaEX0017384, in the *CRYL1* gene, in an experimentally determined structure (PDB ID: 3F3S), and HsaEX0034475, in the *KIF1B* gene, in a modeled structure. B) Schematic representation of the pipeline used to map exons to PDB protein structures or to models done with Phyre2. C) Pie charts displaying the number of AltEx events covered in PDB or modeled protein structures for human (top), mouse (center) and chicken (bottom).
