

Fig. S3

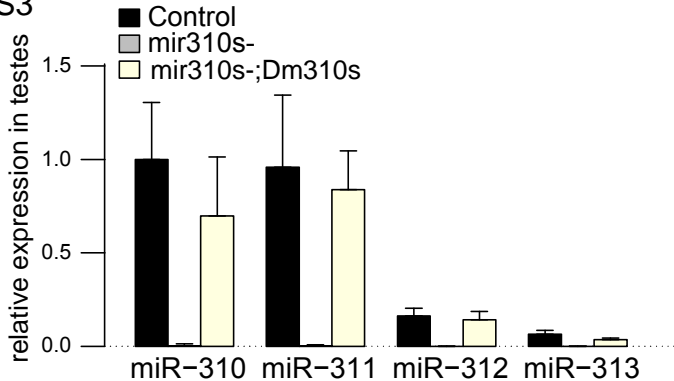

Figure S3. Relative expression of miR310s was measured by qRT-PCR in testes of 3-day-old males. Expression of all miR310s members was undetectable in mir310s knockout flies (denoted as mir310s⁻, here after), but was restored close to wildtype level when mir310s was re-introduced (denoted as mir310s⁻; Dm310s, here after). qRT-PCRs were performed in triplicate using 2S RNA as endogenous control, error bars are standard errors, Student's *t*-test doesn't indicate significant difference between control and mir310s⁻;Dm310s.
