

A**B**

Supplemental Figure S3. Comparison between Z-linked and autosomal genes in chicken. **A.** \log_2 -transformed M:F expression ratios for autosomal target genes of miR-2954-3p or autosomal miRNAs. For reference, corresponding data for Z-linked genes from Fig. 4C are also included. **B.** Proportion of annotated ohnologs between autosomal targets of miR-2954-3p and autosomal miRNAs. For reference, corresponding data for Z-linked genes from Fig. 4D are also included. Statistical significance is indicated by single ($p < 0.05$), double ($p < 0.01$) or triple ($p < 0.001$) asterisks, or by “n.s.” (not significant).
