

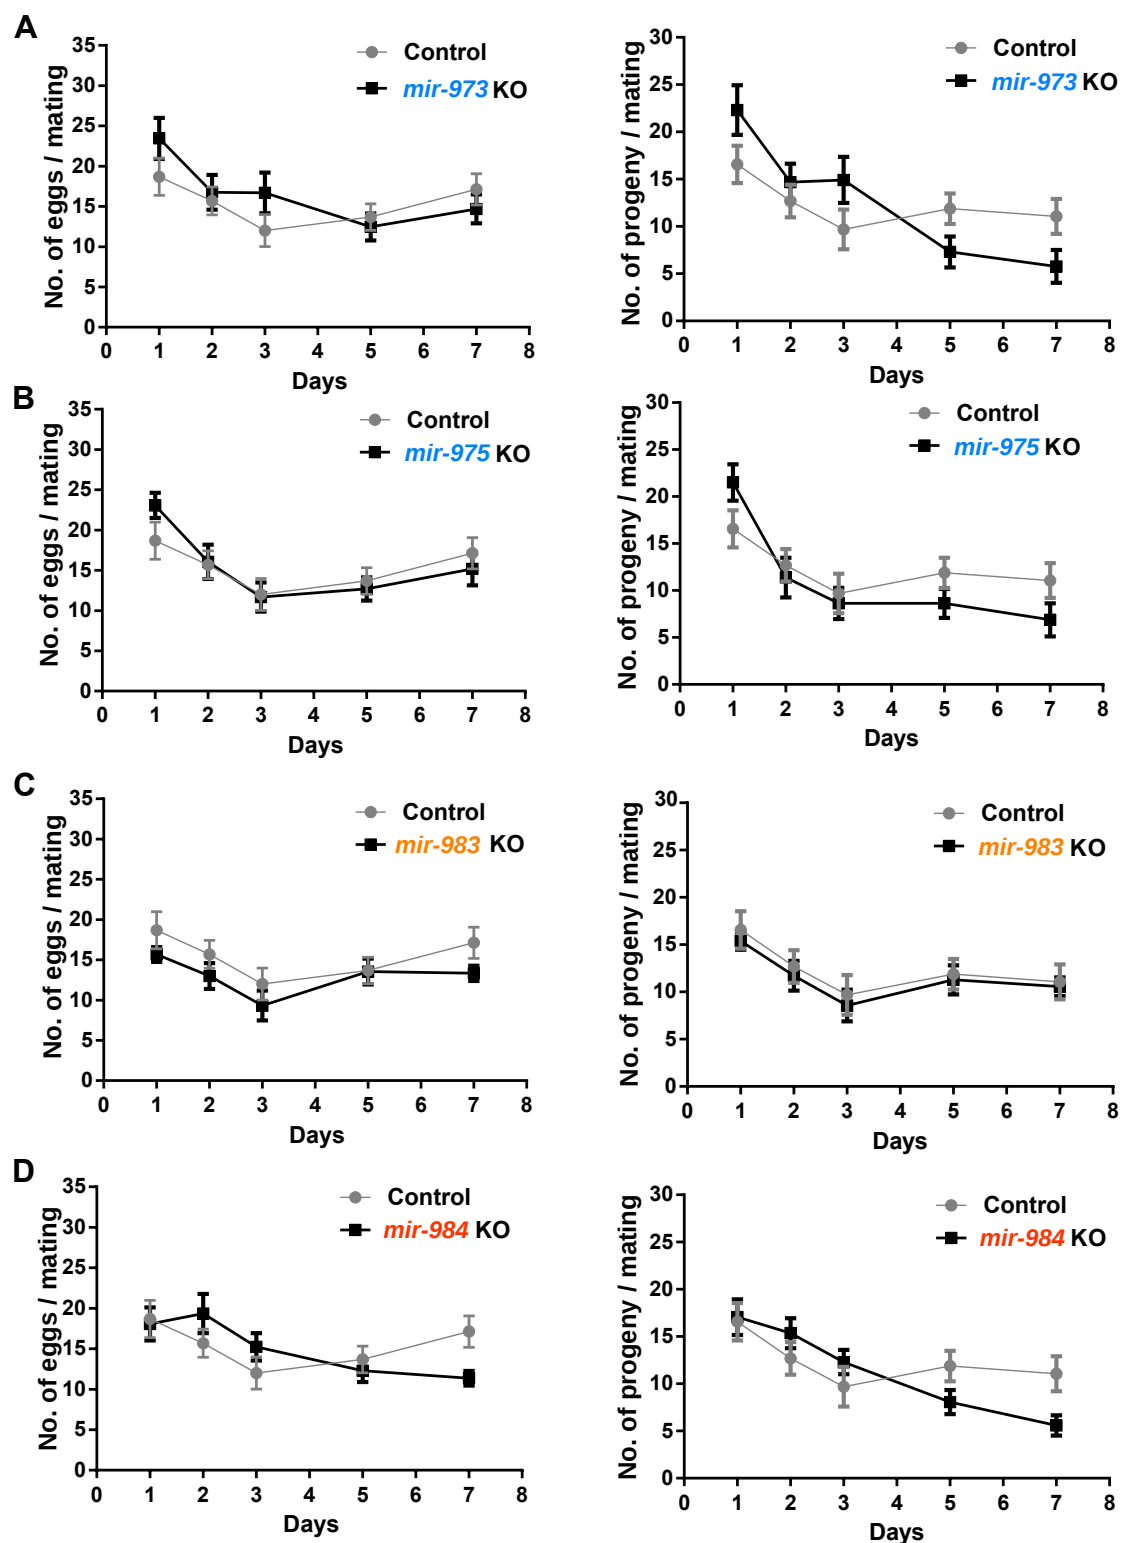

Fig. S4. Male fertility change in *de novo* miRNA mutants.

(A) to (D) depict results for *mir-973*, *mir-975*, *mir-983* and *mir-984* respectively.

Data comes from single-pair mating of miRNA KO males or control males to control females from day one to day seven, $n \sim 12$. Each panel depicts mean $\pm$ SEM of the number of eggs laid by mated females on the left; mean $\pm$ SEM of the progeny number per day in the right.
