

Supplemental Figure S7. Overall human DNA retention stratified by growth time and paclitaxel concentration. (A) Changes in median retention as a result of growth, calculated using aligned sequence reads. (B) Retention changes as a result of growth, calculated assuming *TK1* retention of 1 and corrected for revertants. (C) Retention changes as a result of paclitaxel, calculated using aligned sequence reads. (D) Retention changes as a result of paclitaxel, calculated assuming *TK1* retention of 1 and corrected for revertants. Means \pm s.e.m.
