

**Supplementary Figure 1. lncRNA and protein-coding gene length**

**A**, Histogram showing the distribution of lengths for all protein-coding transcripts in the GENCODE Human Release 29 annotation. **B**, Lengths of all lncRNA transcripts in the FANTOM CAGE associated transcriptome and GENCODE Human Release 29 annotations. **C**, Lengths of all protein-coding genes and **D**, lncRNAs activated in human T98G cells in response to serum stimulation.
