

**Supplemental Figure S3. Structural similarities between ribosome subunits of *M. jannaschii* and their annotated orthologs from *H. sapiens* or *E. coli***

Structural similarities between ribosome orthologs were shown. Paired two-tailed t-tests were performed to examine whether the similarity scores were significantly different. Note that not all ribosome subunits in *M. jannaschii* have annotated orthologs in other species. Therefore, not all data points are paired.
