

A**B**

Supplemental Fig S2. The eGenes.

A. The distribution of SNP heritability for all genes. We have tallied the number of genes within each heritability interval (with a window size of 0.1). The horizontal and vertical coordinates represent the heritability intervals and the number of genes, respectively. **B.** The comparison of SNP heritability between eGenes and non-eGenes. In each box, the horizontal line represents the mean, while the error bars indicate the maximum and minimum values within each group.
